

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

IX.—MONEY	116

INTRODUCTION.

In the following pages the compiler has sought to arrange, in a manner convenient for reference, the weights, measures, and money, of all nations. The work is naturally divided into two parts: first, a classification according to countries, arranged alphabetically; and, second, a set of tables in which the value of each unit is given both in English and in metric standards. This use of the metric system, coextensively with the ordinary system, may be regarded as the characteristic feature of the book. Of course, its introduction on so broad a scale doubled the labor of constructing many of the tables in the work, but the writer believes the labor to have been profitably spent. The metric weights and measures are now legal in this country, and are used by at least twenty nations besides; surely, then, they deserve as much attention as our own more locally familiar but more bungling systems. Our three sets of weights, our three different gallons, and our

INTRODUCTION.

two dissimilar bushels, all unrelated to each other, or to the units of length, must soon give way before the simplicity and elegance of the metric system. That this event may soon happen, and that the weights and measures of the world may before long be reduced to metric uniformity, is the sincere wish and hope of the writer.

F. W. C.

WEIGHTS, MEASURES, AND MONEY.

PART FIRST.

THE tables given in this part of the work need no explanation save in one particular. In the tables which relate to coinage the weight is expressed in troy grains, and the fineness in thousandths. Thus a gold coin is 900 fine when it contains in 1,000 parts 900 of pure or "fine" metal. It will be noticed in many cases that the absolute metal value of a coin varies from its assumed theoretical worth. Variations of this sort are, however, generally trifling, although obviously unavoidable altogether.

Abyssinia.

Length.—The pic = 27 inches, or 0.686 metre.

Liquid Measure.—The kuba, or cuba, = 0.2684 gallon, or 1.0166 litres.

Dry Measure.—For grain, the chief measure is the ardeb; which at Gondar in the interior is divided into 10 madegas, and at Massowah on the sea-coast into 24 madegas. At Gondar, the ardeb equals 0.11465 bushel, or 4.039 litres; at Massowah it is 0.33333 bushel, or 11.745 litres.

Weight.—10 dirhems make 1 wakea.

12 wakeas " 1 rotl, rottolo, or liter, = 4,800
 grains.

32 rotl " 1 mond, or maund.

12 dirhems " 1 mocha, = 1 troy ounce.

For coinage, Abyssinia depends upon foreign countries. Venetian sequins, Spanish dollars, and the "Maria Theresa dollars," of Austria, are chiefly in circulation. The last-named coins are also called patakas, or patacks.

23 harfs = 1 pataka.

$2\frac{1}{2}$ patakas = 1 sequin.

Large payments are made in gold ingots, weighed by the wakea. A wakea of gold commonly rates at a little less than 12 patakas, but of course the value fluctuates. In some localities small bricks of salt, and strings of beads, serve as currency.

Achin, or Acheen. *See SUMATRA.*

Afghanistan.

The money, weights, and measures of Afghanistan are like those of Persia, Arabia, and India.

In length, 1 goess = 45.67 inches, or 1.16 metres.

Algeria.

Since the French conquest, the French coinage, weights, and measures, have been used. The earlier, native values were about as follows:

Length.—The Turkish pic = 24.92 inches, or 0.633 metre.

" Arabic " = 18.96 " " 0.482 "

Each pic is divided into eight parts, called *robi*.

Liquid Measure.—The khoullé = 4.4027 gallons, or 16.66 litres.

Dry Measure.—The tarrie = 0.56295, the saâ = 1.36215, and the caffiso = 9.00718 bushels.

Weights.—The karob = 3 grains. The mitkal or metical = 72.06 grains, used in weighing gold, etc. The wakea = 12.04 oz. The rotl attari, for spices, = 1.20396 lb.; the rotl feuddi, for gold and silver, = 1.096714 lb.; the rotl gheddari, for fruits, = 1.854458 lb.; and the rotl khebir, = 2.03167 lbs., or a little less than one kilogramme. There are also corresponding quontars, or cantaros, equal respectively to 100 of each rotl.

Money.—The former silver rial-boudjou was equal to \$0.3617. The pataca chica, money of account, was worth about \$0.223.

Amboyna. *See Moluccas.*

Annam.

Length.—Here there are two systems; the first used for cloth measure, the second employed by architects and builders. 10 ly = 1 phan; 10 phan = 1 tac; 10 tac = 1 thuoc; 10 thuoc = 1 truong; 3 truong = 1 that; 10 that = 1 gon. In this system the phan = 0.2558 inches. In the architect's scale the phan = 0.1918 inches, and is subdivided as in cloth measure. Above the thuoc, 5 thuoc = 1 ngu; 3 ngu = 1 sao; 10 sao = 1 mau.

Road Measure.—2 ly = 1 dam, of about 0.55 mile.

Surface.—Squares of builder's long measure are used in measuring land.

Capacity.—No authentic system.

Weight.—The ly, = 0.6 grain, is decimals subdivided down to its millionth part. Of course these minor weights are imaginary. Above the ly, 10 ly = 1 phan; 10 phan = 1 dong; 10 dong = 1 luong; 10 luong = 1 nen; 1.6 nen = 1 can. The can = 1.378 lbs., or 624.838 grammes. 10 can = 1 yen; 5 yen = 1 binh; 2 binh = 1 ta; 5 ta = 1 quan. The quan = 688.76 lbs.

Money.—60 sapeks = 1 mas; 10 mas = 1 kwan. The kwan equals \$0.6698.

Antigua. *See West Indies.*

Arabia.—MOCHA; *See also Muscat.*

Length.—The guz, gez, or goess = 25 inches, or 0.63498 metre. The cobido or covid = 19.0 inches, or 0.4826 metre. The kassaba = 4.1 yards, or 3.75 metres.

Road Measure.—The baryd, of 4 farsakh = about 12 miles.

Liquid Measure.—16 vakias = 1 noosfia or nusfiah; 8 noosfias = 1 gudda or cuddy; = 1.999 gallon, or 7.567 litres.

Dry Measure.—40 mecmadas or kellas = 1 teman or tomund; 1 teman of rice weighs 168 lbs. avoirdupois.

Weights.—40 vakias = 1 maund or maon, = 3 lbs., or 1.3608 kilogrammes. 10 maunds = 1 frazil, = 30 lbs., or 13.61 kilo-

grammes. 15 frazils = 1 bahar, = 450 lbs., or 204.12 kilogrammes. At Bet-el-faki the maund is equivalent to 2.039 lbs., and at Jidda to 1.830078 lbs. In the former place the bahar contains 400 maunds, and at the latter only 100. These towns also have a rotl, equal at Bet-el-faki to 1.019531 lbs., and at Jidda to 0.366016 lb.

At Mocha the wakega, used in commerce, = 1 lb. avoirdupois; the wakega for gold and silver being only 0.68571 lb. Minor weights are the danik, 7.86 grains troy; the coffala, used in weighing gold and silver, 48 grains; and the miscal, 72 grains.

Money.—Accounts are kept in piastras of 80 caveers; the value of the piastre being about \$0.8337. Another authority makes it 90 cents. Payments may be made also in Spanish dollars. The commassce is a small native coin containing 7 carats silver, and worth about 40 to the dollar.

Argentine Confederation.

The metric system of weights and measures has recently been introduced, and is now the only system recognized in the custom-houses of the republic. The former weights and measures were as follows, being of Spanish origin:

Length.—4 palmas = 1 vara; 2 varas = 1 braza. Also, 3 pies = 1 vara. The vara = 34.1208 inches, or 0.866 metre.

Road Measure.—The legua = 600 varas, or 0.3231 mile. The milla = 1.149 miles, or 1.85 kilometres. Used upon railroads.

Liquid Measure.—32 frascos = 1 baril. The frasco = 0.6274 gallon, or 0.2874 litre.

Dry Measure.—The lastre = 2 toneladas, or 15 fanegas. The fanega = 3.8936 bushels, or 137.195 litres.

Weight.—25 libras = 1 arroba; 4 arrobas = 1 quintal; 20 quintals = 1 tonelada. The libra = 1.0127 lb., or 0.45936 kilogramme. The arroba of Buenos Ayres = 25 Castilian libra, or 25.3583 lbs. The marco, for gold and silver, = 3544.4 grains.

Money.—8 reales = 1 peso fuerte; 16 pesos = 1 onza. The United States value of the peso fuerte (Secretary of the Treasury, 1874) is exactly \$1.00. The gold onza, of 1813 to 1832, according

to the United States assay, = \$15,5146. That from 1828 to 1832, \$14,6579.

Australia.

Generally the same as Great Britain. The value of certain gold coins is given as follows by the Director of the United States mint: Pound of 1852, weight .281 ounce, 916 $\frac{1}{2}$ fine, value \$5.324. Of 1855, weight .256 ounce, 916 $\frac{1}{2}$ fine, value \$4.8501. Sovereign of 1855 to 1860, weight .2565 ounce, 916 fine, value \$4.857.

Austrian Empire.

After January 1, 1876, the metric system will be the legal one. See also, BOHEMIA, HUNGARY, and POLAND.

Length.—12 punkte make 1 linie.

12 linien " 1 zoll.

12 zoll " 1 fuss = 1.03713 feet, or 0.31611 metre.

6 fuss " 1 kлаster.

The elle = 2.465 fuss, = 30.676 English inches.

The ruthe = 12 fuss, = 12.44556 English feet.

Engineers and surveyors use a system derived from the ruthe, in which $\frac{1}{16}$ ruthe = 1 decimal fuss, $\frac{1}{160}$ ruthe = 1 decimal zoll, and $\frac{1}{1600}$ ruthe = 1 decimal linie.

Road Measure.—4,000 kлаster, or 24,000 fuss = 1 meile. The meile = 4.714227 miles, or 7.5866 kilometres.

Surface.—Commonly, squares of the measures of length. In measuring land, the joch (which is divided into three metzen), = 1,600 square kлаster, or 57,600 square fuss. The joch = 1.4223 acres, or 57.55 ares.

Liquid Measure.

2 pfiff make 1 seidel.

2 seidel " 1 kanne or halbe mass.

2 kannen " 1 mass, = 1.49525 quarts, or 1.4149 litres.

10 mass make 1 viertel.

4 viertel " 1 eimer, = 14.9525 gallons, or 56.5997 litres.

24 eimer make 1 dreiling.

32 eimer " 1 fuder.

Dry Measure.—For coke and coal the stüblch, = 2 metzen, is used; for lime, the kalkmützel, = 2½ metzen; for wood, the cord of ¼ cubic klafter. Ordinary dry measure is as follows:

2 becher	make 1 kleines massel.
2 kleine massel	" 1 grosses massel.
2 grosse massel	" 1 müller-massel.
2 müller massel	" 1 achtel.
2 achtel	" 1 viertel.
4 viertel	" 1 metze, = 1.74512 bushels, or 61.49 litres.

30 metzen	" 1 muth.
-----------	-----------

Weight.—1st. Ordinary Commercial:

4 pfennige	make 1 quentchen.
4 quentchen	" 1 loth.
2 loth	" 1 unze.
4 unzen	" 1 vierding or vierling.
2 vierding	" 1 mark, = 0.6173 pound, or 280.0 grammes.
2 mark	make 1 pfund, = 1.2346 pounds, or 560.0 grammes.

20 pfund	make 1 stein.
5 stein	" 1 centner, = 123.4615 lbs.
4 centner	" 1 karch.
20 centner	" 1 schiffslast (shipping ton).
40 centner	" 1 last (ordinary).

The saum = 275 pfund.

The saum (of 2 lägel) for Styrian steel = 250 pfund.

The zollpfund of the Zollverein, for customs, = 500 grammes.

The münzpfund also = 500 grammes.

2d. Weights for Precious Metals:

4 pfennig	make 1 quentchen.
4 quentchen	" 1 loth.
16 loth	" 1 mark, = 4,833 grains, or 280.0 grammes.

The karat for jewels = 3.1799 grains, or 0.206085 gramme.

3d. Apothecaries' Weight, in which the pfund is 1½ mark.

20 gran	make 1 scrupel.
3 scrupel	" 1 drachme.
8 drachmen	" 1 unze.
12 unzen	" 1 pfund = 6,499 grains troy.

Money.—Formerly, 4 pfennige made 1 kreutzer; 60 kreutzer 1 florin or gulden; 2 gulden 1 thaler. The ducat was $4\frac{1}{2}$ gulden, 20 gulden were coined from the Cologne mark of fine silver, each one being worth \$0.5054.

The new florin or gulden of 100 kreutzer is equal to $\frac{1}{45}$ of a münzpfund (500 grammes) of fine silver. The vereinsthaler of $\frac{3}{10}$ münzpfund is $1\frac{1}{2}$ florins. This florin is worth \$0.4803, and rates in the United States custom-houses at \$0.4760.

The following table gives the chief coins, their value, weight in troy grains, and fineness in thousandths :

COINS.	Material.	Weight.	Fineness.	Value.

Azores Islands. Generally like PORTUGAL.

Dry Measure.—2 quartos = 1 meio; 2 meios = 1 alquiere;

4 alquieres = 1 fanga, of 1.35959 United States bushels, or 47.907 litres.

Money.—The milreis, in U. S. custom-houses, rates at \$0.835.

Baden. See also GERMAN EMPIRE.

Length.—The ruthe, = 3 metres, is divided decimaly into 10 fuss, 100 zoll, 1,000 lipien, and 10,000 punkte. The elle = 6 decimetres. In United States measure the fuss = 11.811 inches. The klapster = 3 ellen.

Road Measure.—The wegstunde ($\frac{1}{3}$ meile) = 14814.8148 fuss. The meile = 5.5234 English miles.

Surface.—100 square ruthen = 1 viertel; 4 viertel = 1 morgen. The morgen = 36 ares, or 0.8897 acre.

Liquid Measure.—The fuder is divided decimaly into 10 ohm, 100 stützen, 1,000 mass, and 10,000 glas. The value of the mass is 1.5 litres, or 1.585 quarts.

Dry Measure.—The malter (of 150 litres) is divided decimaly into 10 sester, 100 mässlein, and 1,000 becher. 10 malter = 1 zuber. In United States measure the malter = 4.257 bushels.

Weight.—1 centner = 10 stein = 100 pfund = 1,000 zehnling, = 10,000 centass = 100,000 dekass or pfennig = 1,000,000 ass. The pfund, which is the same as the zollpfund or münzpfund of Germany in general, = 500 grammes, or 1.1023 lbs.

For apothecary's weight, see GERMAN EMPIRE.

Money.—The table gives the more important coins of Baden, their material, fineness, and value in United States dollars :

COINS.	Material.	Fineness.	Value.
Former Ludwig d'or.....	Gold.	\$3.4888
" doppelthaler (8½ gulden). Before 1857.	Silver.	1.4409

Bahamas. *See WEST INDIES.*

Balearic Islands. *See SPAIN.*

On these islands there are various local measures and weights. Even the more general standards, as the libra, the cantaro, palma, etc., have, however, different values on the different islands of the group, the discrepancies being sometimes very great. Peculiar to Minorca is the gerrah = 3.18599 gallons. Majorca has the quartés, 1.10274, the quartin, 7.16781 gallons; and the oder of 100.2178 lbs. For length, the palmo = 7.697 inches. For weight, the libra = 0.882 lb.

Bantam. *See JAVA.*

Barbadoes. *See WEST INDIES.*

Barbary States. *See ALGERIA, TRIPOLI, and TUNIS.*

Barbuda. *See WEST INDIES.*

Batavia. *See JAVA.*

Bavaria. *See also GERMAN EMPIRE.*

Length.—12 linien make 1 zoll.

12 zoll " 1 fuss, = 11.49 in., or 0.29184 metre.

6 fuss " 1 klafter.

10 " " 1 ruthe.

The elle = 34.25 zoll. By engineers and surveyors the fuss is decimally divided. Local values of the fuss and of the elle are known at Augsburg and Nuremberg.

Road Measure.—The meile = $\frac{1}{15}$ of an equatorial degree, = 4.6143 miles. The Anspach meile = 5.3652 miles.

Surface.—The juchart, morgen, or tagewerk = 40,000 square fuss, and is decimally divided. It equals 34.0536 ares, or 0.8416 acre.

Liquid Measure.—64 mass make 1 eimer. For wine, the eimer = 16.9444 gallons; for beer, 18.07505 gallons. The müdde of Augsburg, an old measure, = 14.92156 gallons; the Nuremberg visirmass = 0.30302 gallon; and the schenkmass of the same

city = 0.28505 gallon. In old times almost every large town seems to have had its own local system.

Dry Measure.—2 dreissiger make 1 mässlein.

2 mässlein	"	1 massel or achtel.
4 massel	"	1 viertel.
2 viertel	"	1 metze.
6 metzen	"	1 scheffel, = 6.31002 bushels, or 222.34 litres.

For wood, the klapfer is used, = 126 kubik fuss, or 3.1325 cubic metres, or 110.6305 cubic feet.

Weights.—

4 quentchen	make 1 loth.
4 loth	" 1 halber vierling.
2 halbe vierling	" 1 vierling.
4 vierling	" 1 pfund.

This is the pfund of the Zollverein, of 500 grammes, or 1.102364 lbs. avoirdupois. The commercial pfund = 560 grammes, is divided into 16 unzen, 32 loth, and 128 quentchen, and is equal to 1.2346 lbs. avoirdupois. For apothecary's weight, the old apothecary's pfund of Nuremberg, with its subdivisions, is used throughout Germany. See GERMAN EMPIRE.

Money.—4 pfennige = 1 kreuzer; 60 kreuzer = 1 florin or gulden; 16 gulden = 1 krone. The table gives the more important coins, their material, weight in troy grains, fineness in thousandths, and value in United States dollars:

COINS.	Material.	Weight.	Fineness.	Value.

Belgium.

The weights and measures are the metric weights and measures of France. Sometimes different names are used, as aune for metre, litron for litre, livre for kilogramme.

Money.—The lawful currency is in francs and centimes, precisely as in France. The value of the franc, as a money of account, is in the United States \$0.193. The franc formerly rated at \$0.186.

COINS.	Material.	Weight.	Fineness.	Value.
25 franc piece	Gold.	121.92	.899	\$4.7200
5 " "	Silver.	355.84	.897	.9800
2 " "	"	153.60	.835	.3640

Beloochistan. Like AFGHANISTAN.**Bengal.** See INDIA.**Bermudas.** See WEST INDIES.**Birmah.** (RANGOON.)

Length.—The palgat or paulgaut = 1 inch, or 0.0254 metre; 18 paulgaunts = 1 taim or cubit; 22 paulgaunts = 1 saundaung or royal cubit.

Road Measure.—7 saundaungs = 1 dha or bambou; 1,000 bambous = 1 dain or taing. The taing = 2.4306 miles, or 3.9116 kilometres.

Weight.—100 ticals or 3 catties = 1 vis; 150 vis = 1 candy. The candy = 500 lbs., or 226.801 kilogrammes.

Bohemia. (PRAGUE.) See also AUSTRIA.

Length.—The Prague fuss = 11.88 inches, and the elle 23.2 inches.

Surface.—2 strich = 1 Austrian joch.

Liquid Measure.—4 seidel = 1 pinte; 32 pinten = 1 eimer; 4 eimer = 1 fass. The fass = 64.5598 gallons.

Dry Measure.—12 seidel = 1 massel; 4 massel = 1 viertel; 4 viertel = 1 strich. The strich = 2.65618 bushels.

Weight.—20 pfund = 1 stein; 6 stein = 1 centner. The pfund is subdivided as in Vienna, but is a trifle lighter than the Imperial standard.

These are only local weights and measures. The legal system is, of course, that of Austria.

Bokhara. *Sce TURKESTAN.*

Bolivia.

The metric system is recognized at the custom-houses. The other weights and measures are of Spanish origin.

Weights.—4 arrobas = 1 quintal. The quintal = 46 kilogrammes, or 101.4179 lbs.

Money.—10 cents = 1 real; 10 reals = 1 peso. The peso is rated in the United States (Secretary of the Treasury, 1874) at \$0.9651. Its theoretical value is about \$1.03.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.

Borneo.

The island contains English and Dutch settlements, in which the corresponding weights and measures are known.

Dry Measure.—The gantang = 0.73782 bushel.

Weights.—The pecul = 135.6354 lbs. Minor weights seem to be something as follows :

3 malaborong = 1 tica; $1\frac{1}{2}$ tica = 1 copang; 4 copang = 1 mace; 4 mace = 1 pahaw; 4 pahaws = 1 tael. The tael = about 614 troy grains, or 39.828 grammes.

Bourbon, Isle of.

French colony, using French weights and measures.

Brazil.

The metric system is now the legal system of weights and measures. The former scales were essentially Portuguese, with variations, these being different in different parts of the empire. The alquiere = 1.13512 bushels; the vara = 1.18878 yards; the arroba (of 32 arratels) = 32.3792 lbs.; the quilate, a weight for gems, = 3.075 grains; and the outava, for topazes, = 57.17 grains.

Money.—The milreis, as a money of account (Secretary of the Treasury, 1874), is rated in the United States at \$0.5456.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.

Bremen. See also GERMAN EMPIRE.

Length.—10 linien = 1 zoll.

12 zoll = 1 fuss, = 11.386 inches, or 0.2892 metre.

2 fuss = 1 elle.

3 ellen = 1 klafter.

8 " = 1 ruthe.

Road Measure.—The meile of 20,000 Rheinfuss = 3.9 miles, or 6.28 kilometres.

Surface.—The morgen = 120 square ruthen = 30,720 square fuss. The morgen = 0.6343 acre.

Solid Measure.—The faden = 72 kubikfuss.

Liquid Measure.—

4 mingel	make 1 quartier.
9 quartier	" 1 viertel.
3 viertel	" 1 anker.
4 anker	" 1 ohm, = 38.2263 gallons, or 144.964 litres.
8 ohm	" 1 fuder.
The stübchen	= 4 quartier.
" oxholt	= 6 anker.

Dry Measure.—

4 spinten	make 1 viertel.
4 viertel	" 1 scheffel, = 2.10195 bushels, or 74.064 litres.
40 scheffel	make 1 last.

Weights.—4 ort make 1 quentchen.

4 quentchen	" 1 loth.
2 loth	" 1 unze.
8 unzen	" 1 mark.
2 mark	" 1 pfund, = 1.09906 lbs., or 0.498 kilogramme.

The schiffpfund (of 20 liespfund) = 290 pfund. The fracht-pfund or pfundschwer = 300 pfund. The centner = 116 pfund.

Money.—5 schwaren = 1 grot; 72 groten = 1 thaler. The value of this thaler is \$0.7476, but it was recognized in the United States, under the law of March 3, 1843, at \$0.71. By the law of 1842, the silver rix-thaler, worth \$0.7911, was rated at \$0.7875. The old gold thaler, of which about $8\frac{1}{2}$ equal the modern vereins-krone, = \$0.7912.

Brunswick (BRAUNSCHWEIG). See also GERMAN EMPIRE.

Length.—12 zoll = 1 schuh; 2 schuh = 1 elle. The schuh = 11.235 inches; or 0.285 metre. The ruthe = 8 ellen.

Road Measure.—The meile (of 34,424 Rhenish feet) = 6.7136 miles.

Surface.—The morgen = 120 square ruthen, or 30,720 square schuh. English value, 0.6208 acre.

Liquid Measure.—2 nössel = 1 quartier ; 4 quartier = 1 stübchen ; 40 stübchen = 1 ohm ; 6 ohm = 1 fuder. The fuder also = 4 oxhoft. The fass of beer (4 tonnen) = 108 stübchen. The stübchen = 0.988 gallon, or 3.74 litres.

Dry Measure.—4 becher or löcher = 1 vierfass ; 4 vierfass = 1 himt ; 10 himt = 1 scheffel. The scheffel for wheat = 8.6672 bushels ; for oats, 10.40064 bushels. 4 scheffel make 1 wispel.

Weight.—2 heller = 1 pfennig ; 4 pfennige = 1 quentchen ; 4 quentchen = 1 loth ; 16 loth = 1 mark ; 2 mark = 1 pfund. The pfund = 1.0306 lbs., or 0.4674 kilogramme. The schiffpfund = 20 liespfund = 280 pfund.

For apothecary's weight *see GERMAN EMPIRE.*

Money.—The former gold pistole, = 5 gold thaler, was worth \$3.96. The silver thaler of 24 gute groschen was worth \$0.7254. In the United States, by law of 1846, it rated at \$0.69.

Buenos Ayres. *See ARGENTINE CONFEDERATION.*

Cambodia. *See ANNAM.*

Canada, including NOVA SCOTIA, NEW BRUNSWICK, NEWFOUNDLAND, PRINCE EDWARD'S ISLAND, and the other BRITISH POSSESSIONS IN NORTH AMERICA.

Weights and measures as in GREAT BRITAIN. In Lower Canada, however, one or two old French measures are occasionally met ; as the minot, for wheat, = 1.1111 United States bushels ; and the arpenter, for land, = 0.8449 acre.

Money.—The standard is the dollar of 100 cents, equal in value to that of the United States. The silver 20 and 25 cent pieces are 925 fine, with the following weight and intrinsic value : 20 cent, weight 72.0 grains, value \$0.185 ; 25 cent, weight 90.0 grains, value \$0.231. Under United States statutes, prior to act of March 3, 1873, the pound of the British Provinces rated in our custom-houses at \$4.00.

Canary Islands.

The measures, weights, and coins, are derived from SPAIN, though somewhat varied. For length, the pié or Castilian foot = 11.126 inches. In weight, the libra = 1.0148 lbs.

Candia. See CRETE.

Cape of Good Hope, or Cape Colony.

Weights and measures those of GREAT BRITAIN. The currency is also British, although occasionally the former Dutch values are encountered.

Cape Verde Islands. See PORTUGAL.

Celebes.

The pecul = 135.64 lbs. In general, the weights and measures resemble or are identical with those of the other neighboring islands under the sway of the Netherlands.

Central America. (GUATEMALA, HONDURAS, NICARAGUA, SAN SALVADOR, and COSTA RICA.)

The weights and measures are of old Castilian origin, but varied.

Length.—The vara = 32.874 inches, or 0.835 metre.

Liquid Measure.—The cantara of 4 cuartillas = 4.2631 gallons, or 16.137 litres

Dry Measure.—The fanega of 4 cuartillas = 1.5745 bushels, or 55.48 litres.

Weight.—25 libras = 1 arroba; 4 arrobas = 1 quintal. The libra = 1.043 pounds, or 0.4731 kilogramme.

Money.—The unit is the pezo or dollar of 100 centavos. Its value in the United States (Secretary Treasury, 1874) is \$0.9650.

COINAGE TABLE.

COINS.	Material.	Weight.	Fineness.	Value.
Onza of 1833, by U. S. mint assay.....	Gold.	\$14.9650
Costa Rican half-onza of 1850. U. S. mint assay.....	"	100.32	853½	7.6293

Ceylon.

Generally, British measures of length and surface are used. The covid, when employed, = 18.5 inches.

For liquids, the seer = 1.2 quarts; and the parrah = 6.75 gallons.

In dry measure, the chundoo = nearly half a pint. The amomam = 5.7757 bushels.

The candy, or bahar, for weight, = 500 lbs. Old measure = 520.675 lbs.

The public accounts are kept in sterling money; but, in ordinary commercial transactions, the sicca rupee is the standard.
See INDIA.

Chili.

The metric system of weights and measures is now legal. Old standards, of Spanish origin, are as follows: The vara = 2.78 feet; the quartillo = 0.2906 gallon; the fanega = 2.575 bushels; the libra = 1.043 lbs.

Money.—The peso or dollar of 100 centavos is the exact equivalent of 5 francs, French currency. Value in United States custom-houses (1874), \$0.9123. The gold condor = 10 pesos.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.
Condor. Piece of 10 pesos.....	Gold.			\$9.1225
" By U. S. mint assay.....	"	236.16	598	9.1360
Old peso or dollar. By U. S. mint ass- ay.....	Silver.	412.72	908	1.0460
New " " " = 5 francs.....	"	384.48	900	0.9648
" " " By U. S. mint assay.....	"	384.48	900	0.981

China.

Length.—The yan is decimaly divided into 10 cheung, 100 chik, 1,000 tsun, 10,000 fan. The official chik, as fixed by the Mathematical Board at Pekin, = 13.125 inches, or almost exactly $\frac{1}{3}$ metre. The surveyor's and engineer's chik = 12.7 inches; and the commercial chik of Canton = 14.76 inches, but varies a little.

Road Measure.—The itinerary chik = 12.17 inches ; of these, 1,800 make 1 li, = 1,825.5 feet, or 556.41 metres.

Capacity.—Since in China almost every thing is sold by weight, the wet and dry measures are seemingly superfluous. There are, however, two systems, in which the measures are similarly named, the names being distinguished by the affixes tsong and shi. These series stand to each other in value as 65 to 100 ; the former being for liquids, the latter for grain. In the liquid, or *tsong* series, the tau is divided into 10 shing and 100 kop. The shing-tsong = 0.1375 gallon. The dry-measure shing (shing-shi) = 0.02177 bushel. Another measure, the sei, = 3.4716 bushels.

Weights.—10 mace = 1 tael; 16 tael = 1 catty or kan ; 2 caties = 1 yin ; 50 yin = 1 pecul or tam. The catty = $1\frac{1}{3}$ lbs., or 604.8 grammes. Hence the pecul = $133\frac{1}{3}$ lbs. The shik is a weight of 160 lbs.

Money.—The tael is decimaly divided into 10 mace (*tseen*), 100 candercens (*fun*), and 1,000 cash (*le*).

The tael now rates in United States customs at \$1.61. Old rate, \$1.48. In parts of China some coins from the English mint are used; these are of silver, 901 fine. The dollar of this series weighs 415.68 grains, and is worth (by United States mint assay) \$1.04. The corresponding ten-cent piece weighs 41.76 grains, and is worth \$0.10 $\frac{1}{2}$.

Circassia. *See RUSSIA.*

Cochin China. *See also ANNAM.*

Here the covid = 15 inches. The tael = 590.75 grains.

Cologne. *See GERMAN EMPIRE, and PRUSSIA.*

Until recently the Cologne mark was used throughout Germany in weighing the precious metals. This should equal 3,609 troy grains ; but the standard copy at Hamburg is 1 grain lighter.

Colombia, or New Granada.

The metric system of weights and measures has recently been adopted. The former system was of Castilian origin.

Money.—The peso, or dollar, is exactly equal to five francs French currency. It is divided into 10 decimos and 100 centavos. 10 pesos make 1 gold condor. The value of the peso in United States customs is \$0.965.

COIN TABLE.

COINS.	Material.	Value.

Corea. *See CHINA.*

Corsica. *See FRANCE.*

A few liquid measures of Italian or Spanish origin may be met with.

Costa Rica. *See CENTRAL AMERICA.*

Crete, or Candia.

For length, the pic = 25.09 inches, or 0.6373 metre.

For liquids, the oke = 0.3458 gallon. The mistate, for oil, = 2.948 gallons.

The carga = 4.82311 bushels.

For weight, the cantaro of 100 rottoli or 44 oka = 116.57 lbs.

The currency is essentially Turkish.

Cuba. *See WEST INDIES.*

Curacao. *See WEST INDIES.*

Cyprus.

For length, the pic = 26.45 inches, or 0.6718 metre.

For liquids, the cass = 1.25 gallons.

For grain, etc., the medinno = 2.1312 bushels.

Weights.—The oka = 2.7957 lbs. The rotolo = $1\frac{1}{8}$ oka, and 100 rotolos = 1 kantar or cantaro. Hence the kantar = 524.3 lbs., or 237.77 kilogrammes. The moosa is a weight of 112 lbs.

Demerara. See *GUIANA*.

Denmark.

Length.—12 linie = 1 tomme.

12 tomme = 1 fod = 12.358 inches, or 0.3139 metre.

2 fod = 1 aln.

3 aln = 1 favn.

5 " = 1 rode.

Road Measure.—The miil (= 12,000 aln) = 4.6812 miles, or 7.5335 kilometres.

Surface.—The tondeland (= 14,000 square aln) = 1.3635 acres, or 55.2 acres.

Liquid Measure.

4 poegel make 1 pot, = 1.0208 quarts, or 0.9666 litre.

2 pot " 1 kande.

39 " " 1 anker.

The pot = $\frac{1}{3}\frac{1}{2}$ cubic fod. The tönde (for beer) = 4.25 cubic fod. The tönde (of tar) = 120 pot.

Dry Measure.—The tönde used for coal and charcoal = 5.5 cubic fod. Regular measures are as follows:

2 halvotting make 1 ottingkar.

2 ottingkar " 1 fjerdingkar.

2 fjerdingkar " 1 skoëpppe.

8 skoëpppe " 1 tönde, = 3.9477 bushels, or 139.098 litres.

This tönde = $4\frac{1}{2}$ cubic fod, or 144 pot.

Weight.—10 ort make 1 quint.

10 quint " 1 pund, = 1.102368 pounds, or 500 grammes.

100 pund make 1 centner.

In this scale the pund is the pfund of the German Zollverein. The old pund was defined as the weight of $\frac{1}{6}\frac{1}{2}$ cubic fod of rain-water at $16\frac{2}{3}^{\circ}$ Centigrade; or about 1.100885 lbs. avoirdupois.

16 old pund = 1 lispund ; 20 lispund = 1 skippund.

For precious metals—

4 ort make 1 quintin.

4 quintin " 1 lod.

16 lod " 1 mark, = 0.5149 lb., or 233.56 grammes.

Apothecary's weight—

60 gran make 1 drachme.

8 drachme " 1 unze.

12 unze " 1 pund, = 0.788974 lb. avoirdupois.

Money.—The rigsdaler equals 6 marks, and each mark is divided into 16 skillings. 2 rigsdalers make 1 specie daler.

The krone is a money of account, worth in United States customs \$0.268.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.

Dominica. See WEST INDIES.

East Indies. See INDIA, CEYLON, ANNAM, BIRMAH, SIAM, MALACCA, MOLUCCAS, PHILIPPINE ISLANDS, SOOLOO ARCHIPELAGO, JAVA, SUMATRA, BORNEO, etc.

Ecuador.

Formerly, Spanish weights and measures were employed. Now the metric system is in vogue.

The peso, or dollar, is the equivalent of the French 5-franc piece, and is rated in United States customs at \$0.965.

The 4 escudo gold piece, by United States mint assay, weighs 207.84 grains, is 844 fine, and is worth \$7.555.

Egypt.

Since 1871 the metric system has been legal.

Length.—4 kérats make 1 abdat.

3 abdats “ 1 kadam.

2 kadam “ 1 derah, deraA, or pic.

4 derahs “ 1 gasab.

Of the derah there are six different kinds, as follows: The Nile pic = 0.2545 metre; the native pic (derah baladi) = 0.5682 metre; the Constantinople pic (derah Istambuli) = 0.6691 metre; the cloth pic (derah hendazeh) = 0.6479 metre; the builder's pic (derah meimari) = 0.7500 metre; the itinerary or road-measure pic = 0.7389 metre.

The derah Istambuli = 26.34 inches.

Ancient measures were the natural cubit, 17.71 inches, and the royal cubit, 20.66 inches.

Road Measure.—For the itinerary derah or pic, see table of length.

2 bââh make 1 cassaba (equal to 5 derahs).

500 cassabas “ 1 mili, = 1.148 miles, or 1.847 kilometres.

3 mili “ 1 farsakh or league.

4 farsakh “ 1 baride.

2 baride “ 1 { safar yome, of which $2\frac{1}{2}$ make }
1° of the meridian = 60 mili. }

Surface.—Land is partly measured by the squares of the derah meimari, and of the cassaba. (The cassaba, in length, = 3.55 metres.)

The feddan = 333½ square cassabas, and is divided into 24 kérat. Value of feddan, 1.038 acres, or 42.008 ares.

Liquid Measure.—The guirbeh = 70.4467 quarts, or 66½ litres.

Dry Measure.—

2 kérat	make 1 kharroubah.
2 kharroubah	" 1 thoumn-kaddah.
2 thoumn-kaddah	" 1 roub-kaddah.
2 roub-kaddah	" 1 misf-kaddah.
2 misf-kaddah	" 1 kaddah, = 1.735 quarts, or 1.91 litres.
2 kaddah	" 1 malouah.
2 malouah	" 1 rcabouh, ou ".
2 roubouh	" 1 kélé.
2 kélé	" 1 ouebéh.
6 ouebéh	" 1 ardeb, = 2.603 bushels, or 91.72 litres.

These values are from the report of the United States Commissioners to the Paris Exposition of 1867. Other authorities give the ardeb = 5.1648 bushels, and the ardeb of Alexandria = 7.6907 bushels.

*Weights.—*4 kamha make 1 kérat.

24 kérat	" 1 darhim or drachm, = 47.73 grains, or 3.0929 grammes.
400 darhims	make 1 oke, oka, or occa, = 2.7275 lbs., or 1.237 kilogrammes.
144 darhims	make 1 rotl, or rottolo = 0.9819 pound, or 445.41 grammes.
100 rotl	make 1 cantaro = 98.19 lbs.

The harsela, used for weighing silk, is the oke. The darhim, when used for weighing gold, silver, or gems, is also known as the mitkal or metical.

*Money.—*40 paras make 1 piastre. As a money of account, the Egyptian dollar of 20 piastres now rates in United States customs at \$1.0039. (Secretary of the Treasury, 1874.)

COIN TABLE.

France (including CORSIKA). *Colonial Possessions:* ALGERIA, SENEGAL, ISLE OF BOURBON, ISLAND OF ST. MARIE near MADAGASCAR, PONDICHERRY and other towns in INDIA, several of the WEST INDIA ISLANDS, FRENCH GUIANA or CAYENNE, the ISLANDS of ST. PIERRE and MIQUELON near NEWFOUNDLAND, the MARQUESAS ISLANDS, and NEW CALEDONIA.

The metric system of weights and measures originated in France, just before the beginning of the present century. All its units are derived from the unit of length.

Length.—The unit here is the metre, which was intended to represent the ten-millionth part of the distance from the equator to the pole, measured over the surface of the earth. It slightly varies from this, however, and can therefore be regarded only as a unit of length represented by a bar of platinum in Paris, meas-

ured at the temperature of melting ice (0° Centigrade, or 32° Fahrenheit).

10,000 metres make 1 myriametre, = 6.214 miles.

1,000 " " 1 kilometre, = 0.6214 "

100 " " 1 hectometre, = 328.09 feet.

10 " " 1 decametre, = 32.809 "

The metre = 39.37079 inches.

1 metre equals 10 decimetres. Decimetre = 3.937079 inches.

1 " " 100 centimetres. Centimetre = 0.3937 "

1 " " 1,000 millimetres. Millimetre = 0.03937 "

Surface.—Squares of the metre and its derivatives are used. Also the are, equal to a square of ten metres to the side.

100 ares, or 10,000 square metres, make 1 hectare = 2.4714 acres.

The are of 100 square metres = 1076.43 square feet.

The $\frac{1}{100}$ of an are, 1 sq. metre, is the centare = 1550.06 square inches.

Capacity.—The litre is the unit for both wet and dry measure, and equals one cubic decimetre.

10,000 litres make 1 myrialitre, = 2641.8 U. S. gallons.

1,000 " " 1 kilolitre, = 264.18 " "

100 " " 1 hectolitre, = 26.418 " "

10 " " 1 decalitre, = 2.6418 " "

The litre = 1.05672 quarts, U. S. measure.

1 litre equals 10 decilitres. Decilitre = 0.211344 pint, " "

1 " " 100 centilitres. Centilitre = 0.02113 " " "

1 " " 1,000 millilitres. Millilitre = 0.002113 " " "

In dry measure the kilolitre = 28.3782 U. S. bushels; the hectolitre = 2.83782 bushels; the decalitre = 1.13513 pecks; the litre = 0.227 half-peck, and so on. In measuring wood and coal the kilolitre is known as the stere, the myrialitre as the decastere, and the hectolitre as the decistere.

Weight.—The standard of weight is the gramme, which represents the weight of one cubic centimetre of distilled water at its maximum density.

				Avoirdupois.
1,000,000	grammes	make 1 millier or tonneau,	= 2204.62	lbs.
100,000	"	" 1 quintal,	= 220.462	"
10,000	"	" 1 myriagramme,	= 22.0462	"
1,000	"	" 1 kilogramme,	= 2.20462	"
100	"	" 1 hectogramme,	= 0.220462	oz.
10	"	" 1 decagramme,	= 0.0220462	"
		The gramme	= 15.432349	grains.

1 gramme equals 10 decigrammes. Decigramme = 1.543235 " 1 " " 100 centigrammes. Centigramme = 0.15432 " 1 " " 1,000 milligrammes. Milligramme = 0.01543 "

The "Système Usuel," interdicted since 1840, was a popular compromise between the ancient system and the present one. In it, the metre was divided into two pieds or feet of twelve pouces each. Two metres made one toise, and twelve decimetre, one aune or ell. In weights, the livre or pound of 500 grammes was divided into two marcs, sixteen onces, one hundred and twenty-eight gros, and nine thousand two hundred and sixteen grains. The ancient French pied-de-roi was equal to 12.79 inches; six of these pieds made one toise, and two thousand toises one lieue-de-poste, or league. The ancient pound (poids-de-marce) previous to 1795 was equal to 1.0793 lbs. avoirdupois.

Money.—10 centimes make 1 décime; 10 décimes make 1 franc. The theoretical value of the franc in United States money is \$0.1945. The value recognized in United States custom rates is \$0.193.

Equivalent in value to the French franc are the frances of Switzerland and Belgium, the lira of Italy, the peseta of Spain, and the drachma of Greece. These should weigh 5 grammes apiece, the minor silver coinage being proportionately heavy. Several of the South American states now have silver pesos or dollars weighing 25 grammes, and equivalent to the 5-franc piece of France. Of the bronze coins, whose weights in the above table are given in grains, the weight of each one is represented in grammes by the number of centimes; 10 centimes weighing 10 grammes, and so on downward.

Frankfort-on-the-Main. See also GERMAN EMPIRE.

Length.—12 linien make 1 zoll; 12 zoll make 1 werkschuh or fuss. This fuss = 11.205 inches. The elle = 21.55 inches. Surveyors use a fuss (feldfuss) of 14.006 English inches. This is decimaly divided into 10 zoll or 100 linien. 10 feldfuss make 1 ruthe.

Surface.—The morgen = 16,000 square feldfuss = 0.5004 acre.

Liquid Measure.—4 eichmass, or $4\frac{1}{2}$ neumass = 1 viertel; 20 viertel = 1 ohm; 6 ohm = 1 fuder. The viertel = 1,8945 gallons. The mass is divided into 4 schoppen.

Dry Measure.—4 schrott = 1 mässchen; 4 mässchen = 1 gescheid; 4 gescheid = 1 sechter; 2 sechter = 1 metze; 2 metzen = 1 simmer; 4 simmer = 1 malter or achtel.

The malter = 3.25626 bushels.

Weights.—2 heller = 1 pfennig; 4 pfennige = 1 quentchen; 4 quentchen = 1 loth; 2 loth = 1 unze; 8 unzen = 1 mark; 2

mark = 1 pfund. There were in Frankfort two different pfunds, this one (= 1.114073 lbs. avoirdupois) being about 8 per cent heavier than the other. Apothecary weight has been long uniform throughout all Germany.

Money.—2 heller or pfennige = 1 kreuzer; 4 kreuzer = 1 batzen; 15 batzen = 1 gulden or florin; 1½ florins or 90 kreuzer = 1 thaler. The former gulden (1837) was worth \$0.4126. In United States customs it rated at 40 cents. The value of the former gold ducat was \$2.2876.

French Guiana. See **GUIANA**.

German Empire. See also **BADEN, BAVARIA, BREMEN, BRUNSWICK, COLOGNE, FRANKFORT, HAMBURG, HESSE, HANOVER, LÜBECK, MECKLENBURG, PRUSSIA, SAXONY, and WÜRTTEMBERG.**

For old or local systems of weights, measures, and coinage, see these various headings. Recently the metric system has been adopted as the lawful system of Germany, with merely some trifling modifications.

Length.—The meter or stab, zentimeter or new zoll, millimeter or strich.

Surface.—The ar and hektar.

Capacity.—The liter or kanne, the hektoliter or fass. 50 liters make 1 scheffel; ½ liter is called a schoppen.

Weight.—The kilogramme, of 2 pfund; the dekagramme or neu-loth; dezigramme, zentigramme, and milligramme. 50 kilogrammes make 1 zentner; 1,000 kilogrammes make 1 tonne.

For the values of the above measures and weights, see the tables given under **FRANCE**.

Under the Zollverein the weights were a zollpfund of 30 zoll-loth, = 500 grammes or ½ kilogramme; the zollcentner of 100 zollpfund; the zollstein of 2 zollcentner. The münzpfund, used for gold and silver, and divided into 10,000 ass, also equaled 500 grammes.

Throughout Germany the apothecaries have used the apothecary weights of Nürnberg, or Nuremberg. The pfund of this sys-

tem is subdivided exactly as in English apothecaries' weight, and equals 0.788974 lb. avoirdupois.

Money.—The present standard is the mark of $\frac{1}{3}$ of a thaler. In United States customs it now rates at \$0.2382. The vereinsthaler equals $\frac{1}{10}$ of a münzpfund of fine silver, and in Northern Germany is divided into 30 silbergroschen. In Southern Germany the florin or gulden rates $52\frac{1}{2}$ to the münzpfund of fine silver, and is divided into 60 kreuzer.

Great Britain and Ireland.—*Colonial Possessions:* HELGoland, GIBRALTAR, MALTA and GOZO, in EUROPE; GAMBIA, SIERRA LEONE, parts of the GOLD COAST, CAPE COLONY, NATAL, the islands of FERNANDO PO, ST. HELENA, MAURITIUS, and the SEYCHELLES, in AFRICA; ADEN, BRITISH INDIA, parts of FARTHER INDIA, CEYLON, PENANG, MALACCA, SINGAPORE, LABUAN, and HONG-KONG, in ASIA; CANADA, NEW BRUNSWICK, NOVA SCOTIA, PRINCE EDWARD'S ISLAND, NEWFOUNDLAND, LABRADOR, HUDSON'S BAY TERRITORY, BALIZE, most of the WEST INDIA ISLANDS, BERMUDAS, GUIANA, and FALKLAND ISLANDS, in AMERICA; AUSTRALIA, TASMANIA, NEW ZEALAND, NORFOLK ISLAND, AUCKLAND ISLANDS, and the FEEJEE ISLANDS, in POLYNESIA.

<i>Length.—</i>	3 barleycorns	make 1 inch.
12 inches	"	1 foot = 0.3047 metre.
3 feet	"	1 yard = 0.91488 metre.
5½ yards	"	1 rod, perch, or pole.
4 poles or 100 links	"	1 chain.
10 chains	"	1 furlong.
8 furlongs	"	1 mile = 1.6093 kilom'rs.

The old Scotch mile was $1\frac{1}{2}$, and the old Irish mile $1\frac{3}{4}$ English miles.

A line = $\frac{1}{4}$ inch. A nail = $2\frac{1}{2}$ inches (cloth measure). A palm = 3 inches. A hand (in measuring height of horses) = 4 inches. A span = 9, a cubit 18, a Scotch ell 37.06, and an English ell 45 inches. A fathom is 6 feet, and a cable's length 120 fathoms. A league = 3 miles. A degree of the equator = 69.1613 miles, and a degree of meridian = 69,046 miles.

Surface.—

144 square inches	make 1 square foot, = 9.29 sq. decimetres.
9 " feet	" 1 " yard, = 0.836 sq. metre.
30½ " yards	" 1 " rod.
16 " rods	" 1 chain.
40 " " "	1 rood.
4 roods	" 1 acre, or 43,560 square feet.
640 acres	" 1 square mile, = 259 hectares.

The acre = 0.405 hectare.

Liquid Measure.——The imperial gallon is here taken as the standard, and defined as the bulk of ten pounds of distilled water at the temperature of 62° Fahr. Its cubic capacity is 277.274 cubic inches. The gallon of the United States is 231 cubic inches; the old corn-gallon contained 268.8, and the old beer-gallon 282.

Wine Measure.—

4 gills	make 1 pint, = 0.567982 litre.
2 pints	" 1 quart, = 1.135864 litres.
4 quarts	" 1 gallon, = 4.543458 litres.
36 gallons	" 1 tierce.
54 " "	1 hogshead.
108 " "	1 pipe, butt, or puncheon.

But these larger measures are not always to be trusted. In practice, they are actually measured in gallons.

Ale and Beer Measure.—Up to the gallon, like wine measure.

9 gallons	make 1 firkin.
2 firkins	" 1 kilderkin.
2 kilderkins	" 1 barrel.
3 "	" 1 hogshead.
2 hogsheads	" 1 butt.
2 butts	" 1 tun.

The value of such terms as barrel, pipe, hogshead, butt, puncheon, tun, etc., varies with circumstances. Thus, a hogshead of claret is about 46 gallons, one of brandy 55 to 60 gallons. The pipe, for different wines, ranges from 90 to about 120 gallons, and so on. These terms are not rigidly defined.

Apothecaries' Measure.—

60 minimis	make 1 fluid drachm (3).
8 drachms	" 1 " ounce (3).
20 ounces	" 1 pint.
8 pints	" 1 imperial gallon.

Dry Measure.—Up to the gallon, the same as in liquid measure, the value of the gallon being the same.

2 gallons	make 1 peck, = 9.0865 litres.
4 pecks	" 1 bushel, = 36.3460 "
4 bushels	" 1 coomb.
2 coombs	" 1 quarter, = 8 bushels.
5 quarters	" 1 wey or load, = 40 bushels.
2 weys	" 1 last, = 80 bushels.

A strike is 2 bushels. A pottle is half a gallon.

Cubic Capacity in general.—A cubic foot = 1,728 cubic inches. A cubic yard = 27 cubic feet.

42 cubic feet make 1 shipping ton (British).

Weight.—The standard is the pound, which is divided into 7,000 grains. These grains are of equal value in all the following tables :

Avoirdupois Weight.—

16 drachms	make 1 ounce (oz.),	= 28.35 grammes.
16 ounces	" 1 pound (lb.),	= 453.6 "
14 pounds	" 1 stone.	
2 stone	" 1 quarter (qr.),	28 pounds.
4 quarters	" 1 hundred-weight (cwt.),	112 pounds.
20 hundred-weight "	1 ton,	2,240 pounds.

Troy Weight.—

24 grains	make 1 pennyweight (dwt.).
20 pennyweights	" 1 ounce, = 480 grs., or 31.15 gram' es.
12 ounces	" 1 pound, = 5,760 " or 373.76 "

By this scale, gold, silver, platinum, and some gems are weighed. Pearls and diamonds are weighed by the carat of 4 grains; 5 diamond grains being equal to 4 grains troy.

Apothecaries' Weight.—

20 grains	make 1 scruple.
3 scruples	" 1 drachm.
8 drachms	" 1 ounce { Same as in troy weight, as is also
12 ounces	1 pound } the grain.

These weights are used in compounding prescriptions. Drug-gists buy by avoirdupois.

Money.—

4 farthings	make 1 penny.
12 pence	" 1 shilling.
20 shillings	" 1 pound or sovereign, = \$4.8666.

In United States custom-houses it rates at \$4.84.

Greece.

The present system of weights and measures is chiefly metric.

Length.—Formerly there were two piki, one for silks of 25 English inches, another for linen and woolens of 27 inches. The present piki is the metre, with the usual subdivisions. The kilometre is called stadium. In ancient Greece the foot was equal to 11.81 English inches; the cubit was $1\frac{1}{2}$ feet, the stadium was 400 cubits.

Capacity.—The litra, or litre; the kallon, or hectolitre. The former staro of 3 bachels was equal to 2,54835 bushels.

Weight.—400 drachms or 44 oke make 1 cantaro. In different places the cantaro has different values, ranging from 112 to 128 lbs.

The gramme is known as the drachme, the kilogramme as mina, and $1\frac{1}{2}$ kilogrammes as talanton.

Money.—100 lepta or centimes make 1 drachme or franc. The drachme is the exact equivalent of the French franc, and rates in the United States at \$0.193. Formerly its value was only \$0.1761.

In gold, the 20-drachme piece, by United States mint assay, is 900 fine, weighs 88.8 grains, and is worth \$3.442.

The silver 5-drachme piece, by the same authority, is 900 fine, weighs 345.12 grains, and is worth \$0.863.

The true value of the present coinage is, of course, somewhat higher.

Guinea.

Length.—The jaktan = 4 yards, or 12 feet.

Weight.—2 media-table = 1 aguirage ; 2 aguirages = 1 piso or uzan ; 4 pisos = 1 benda-offa ; 2 benda-offas = 1 benda. 3 media-table make 1 quinto ; 6 media-table 1 seron ; 10½ media-table 1 eggeba. The media-table = 31.02 grains troy. The akey is a weight of 20.03 grains. The rotl = 0.9538 lb. avoirdupois.

Money.—Reckoning is mostly in dollars.

Hamburg. *See also* GERMAN EMPIRE.

Length.—8 achtel = 1 zoll ; 12 zoll = 1 fuss ; 2 fuss = 1 elle. The fuss = 11.27 inches. Surveyors use the Rheinfuss (12.357 inches) decimaly divided.

Road Measure.—The meile of 24,000 Rhenish feet is equal to 4.68 miles.

Surface.—The morgen = 117,600 square fuss, = 2.3852 acres.

Liquid Measure.—2 össel = 1 quartier ; 2 quartier = 1 kanne ; 2 kannen = 1 stübchen ; 2 stübchen = 1 viertel ; 5 viertel = 1 anker ; 4 anker = 1 ahm ; 6 ahm = 1 fuder. The eimer = 4

viertel; the tonne = 24 viertel; the oxhoft = 30 viertel. The viertel = 1.90737 gallons.

Dry Measure.—4 spinten = 1 himt; 2 himt = 1 fass; 2 fass = 1 scheffel; 10 scheffel = 1 wispel; 3 wispel = 1 last. The scheffel = 2.98811 bushels.

Weight.—4 pfennige = 1 quentchen; 4 quentchen = 1 loth; 2 loth = 1 unze; 8 unzen = 1 mark; 2 mark = 1 pfund; 14 pfund = 1 liespfund; 20 liespfund = 1 schifffpfund. The pfund = 1.067886 lbs. avoirdupois.

Money.—12 pfennige = 1 schilling; 16 schilling = 1 mark; 3 mark = 1 rixdollar. This mark = \$0.2972; old United States customs rate \$0.28. 34 marks are coined from the Cologne mark (3,608 troy grains) of fine silver. Banco is an imaginary value of account, in which the Cologne mark is divided into 27½ marks banco. The mark banco = \$0.3642; old United States customs rate, \$0.35.

The gold ducat = \$2.2715.

Hanover. *See also GERMAN EMPIRE.*

Length.—12 linien or 8 achtel = 1 zoll; 12 zoll = 1 fuss; 2 fuss = 1 elle; 8 ellen = 1 ruthe. The fuss = 11.496 inches.

Road Measure.—The meile of 25,400 fuss = 4.6086 miles.

Surface.—60 square ruthen = 1 vorling; 2 vorling = 1 morgen of Calenberg. Also, 1½ drohn = 1 morgen of Calenberg. This morgen = 0.6472 acre.

Liquid Measure.—2 nössel = 1 quartier; 2 quartier = 1 kanne; 2 kannen = 1 stübchen; 2 stübchen = 1 viertel; 5 viertel = 1 anker; 4 anker = 1 ahm; 6 ahm = 1 fuder. 8 viertel = 1 eimer; 30 viertel = 1 oxhoft.

The viertel = 2.07198 gallons. For beer, 26 stübchen = 1 tonne; 4 tonnen = 1 fass.

Dry Measure.—4 vierfass or 3 drittel = 1 himt; 6 himt = 1 malter; 8 malter = 1 wispel; 2 wispel = 1 last. The malter = 5.30559 bushels.

Weight.—4 örtchen = 1 quentchen; 4 quentchen = 1 loth; 2 loth = 1 unze; 8 unzen = 1 mark; 2 mark = 1 pfund. The pfund = 1.079444 lbs. avoirdupois.

Money.—The thaler of 24 gute groschen. The former silver thaler was worth \$0.722. The former gold Louis d'or, Wilhelm d'or, or pistole, = \$3.9593.

Hawaii. *See* SANDWICH ISLANDS.

Hayti. *See* WEST INDIES.

Hesse-Cassel. *See also* GERMAN EMPIRE.

Length.—12 linien = 1 zoll; 12 zoll = 1 fuss (waldfuss or standard foot). This fuss = 11.324 inches. The landfuss or surveyor's foot = 11.217 inches. 2 landfuss = 1 elle; 7 ellen = 1 ruthe.

Surface.—The acker (of 29,400 sq. landfuss) = 0.5897 acre.

Liquid Measure.—4 schoppen = 1 mass; 4 mass = 1 viertel; 20 viertel = 1 ohm; 6 ohm = 1 fuder. The mass for wine = 0.52428 gallon; for beer, 0.57667 gallon.

Dry Measure.—4 mässchen = metze; 4 metzen = 1 himt; 2 himt = 1 scheffel. The scheffel = 2.3 bushels.

Weight.—4 quentchen = 1 loth; 2 loth = 1 unze; 16 unzen = 1 pfund. The pfund = 1.067534 lbs. avoirdupois.

For apothecaries' weight, *see* GERMAN EMPIRE.

Money.—The former gold pistole or Wilhelm d'or, value 5 thaler, = \$3.9822. Modern pistole or Friedrich-Wilhelm d'or = \$4.009. Silver as in Hesse-Darmstadt.

Hesse-Darmstadt. (System of 1821.) *See also* GERMAN EMPIRE.

Length.—The fuss, = $\frac{1}{2}$ metre or 9.8427 inches, is divided decimally into 10 zoll of 10 linien each. 10 fuss make 1 klafter. The elle = $\frac{2}{3}$ metre.

Surface.—40,000 square fuss or 4 viertel make 1 morgen, = 0.6178 acre.

Solid.—The stecken for wood = 100 cubic fuss, or 55.177 cubic feet.

Liquid Measure.—4 schoppen = 1 mass; 4 mass = 1 viertel; 20 viertel = 1 ohm; 6 ohm = 1 fuder. The schoppen = $\frac{1}{3}$ litre or 0.52836 quart.

Dry Measure.—4 mässchen = 1 gescheid; 4 gescheid = 1 Kümpf; 4 kümpf = 1 simmer; 4 simmer = 1 malter. The mässchen = $\frac{1}{2}$ litre, or 0.001419 bushel. The malter = 36.326 bushels. For lime, the kalkbütte = 10 cubic fuss, or 5.5177 cubic feet.

Weight.—4 richtpfennig = 1 quentchen; 4 quentchen = 1 loth; 32 loth = 1 pfund; 100 pfund = 1 centner. The pfund = 500 grammes, or 1.1023 lbs.

Before 1821 the weights and measures were those of Frankfurt.

Money.—Florins or gulden, of 60 kreuzer, of 4 pfennig.

Hindostan. See INDIA.

Holland. See NETHERLANDS

Honduras. See CENTRAL AMERICA.

Hungary. See AUSTRIA.

There are some local weights and measures, and some local variations from general standards. In length, the arsin = 23.01084 inches, and the stab = 5.18565 feet. For liquids, the fass = 52.545 gallons; and the eimer varies from 15.03 gallons in Lower, to 19.37 gallons in Upper Hungary.

The metze = 1.77354 bushels. The oka is a weight of from 2.78 to 3.082 pounds.

Iceland. *See DENMARK.*

The alen = 22.47 inches.

India, British. The PRESIDENCIES of BENGAL, MADRAS, and BOMBAY.

India, French. PONDICHERRY and other minor cities.

India, Portuguese. GOA and other cities.

For FARTHER INDIA, *see* BIRMAH, ANNAM, SIAM, and MALACCA.
See also CEYLON.

Originally, the weights and measures of India were extremely discordant, every petty state or city having its own system. For present purposes only the chief headings can be given, taking first the three Presidencies in their order.

1. **BENGAL (CALCUTTA).**

Length.—3 jows or barleycorns make 1 unglee.

4 unglees or fingers " 1 moot.

3 moots or hands " 1 span.

2 spans make 1 cubit, covid, or haut = 18 inches.

2 covids " 1 gez, guz, or yard, = 36 inches, or 0.914 metre.

2 guz make 1 fathom.

Another table divides the haut or covid into 8 gheria of 9 jaob each. The guz of Patna = 42.5 inches.

Road Measure.—The coss of 1,000 fathoms = 1.1364 miles.

Surface.—20 square covid = 1 chattack; 16 chattack = 1 cottah; 20 cottah = 1 biggah. The biggah = 0.3306 acre, or 13.38 ares.

Grains and liquids are generally measured by weight. Still, some *dry measures* can be given :

5 chattack = 1 khoonke; 16 khoonke = 1 raik; 4 raik = 1 pallie; 20 pallie = 1 soallee. The soallee = 2.3378 bushels. The kahoon, of 42.44 bushels, represents 2,986 $\frac{1}{2}$ pounds weight of grain. In the Mahratta country the koorah = 4.0615 bushels.

Weights.—There are two sets of values for these, the factory values and those of the bazaar. The latter are ten per cent heavier than the former. The factory-weights are the ones given

- 5 siccas make 1 chattach.
 16 chattacks " 1 seer.
 40 seers " 1 maund, = 74.667 lbs., or 33.87
 kilogrammes.

In the Mahratta country the maund = 26.249 lbs.; and at Malla it = 100.45 lbs. The pussaree is a weight of 10.27 lbs., and the pao for grain = 0.816114 lb.

For gold and silver, the new sicca weight or tola is used, of 180 grains; being $\frac{1}{3}$ grain heavier than the bazaar tola. For pearls, the ruttee = 2.825 grains. At Delhi the ruttee is used for precious metals and gems, and is 1.25 grains; another weight for similar purposes being the val, of 5.63 grains. Still another set of weights for precious metals exists, as follows: 2 punko = 1 nely; 2 nely = 1 dhan; 25 dhan = 1 anna of 14.04 troy grains.

Money.—12 pies or pice make 1 anna; 16 annas make 1 Company's rupee = \$0.46217.

The sicca rupee is worth slightly more than the old rupee, and weighs just one new sicca or tola; 80 sicca rupees, or 36 copper annas, weigh one seer. The gold mohur = 15 sicca rupees.

In United States customs the Company's rupee formerly rated at 44 $\frac{1}{2}$ cents; the sicca rupee is now received at \$0.4584. By United States mint assays the rupee and gold mohur rank as follows: Silver rupee, weight 179.52 grains, 916 $\frac{1}{2}$ fine, value \$0.457. Gold mohur, weight 180 grains, 916 $\frac{1}{2}$ fine, value \$7.1059.

2. MADRAS PRESIDENCY.

Length.—The covid, cubit, or haut, is here very variable. At Madras it is 18.6 inches, nearly; at Masulipatan it is 19.125 inches; and, at Mysore, 19.1 inches. Two of these, at Mysore, make 1 gujah. At Travancore the kole = 29.065 inches; and on the Malabar coast the ady = 10.46 inches.

Road Measure.—At Seringapatam, the coss = 3.6458 miles. At Mysore, the hardary = 2.7344 miles, and the gavada 14.5833 miles.

Surface.—24 maoney make 1 casseney or cawney, of 240 square covid. At Madras the cawney = 1.3223 acres; in the Carnatic it is 1.0047 acres.

Capacity.—8 ollucks make 1 puddy.

8 puddies " 1 marcal, = 0.34884 bushel.

5 marcals " 1 parah or chunam.

80 parahs " 1 garce, = 189.535 bushels.

At Masulipatan the marcal = 0.403 bushel. At Mysore the candaca = 11.13 bushels. Both wet and dry measures are determined by weight.

Weight.—10 pagodas make 1 pollam.

8 pollams " 1 seer.

5 seers " 1 vis (visay).

8 vis " 1 maund, = 25 lbs., or 11.34 kilograms.

20 maunds make 1 candy, = 500 lbs.

The candy (also called baruay) is 485.5 lbs. at Mysore and Seringapatam, and 695.5 lbs. on the Malabar coast. The mangal, for pearls, = 6 grains.

Money.—Essentially the same as in BENGAL. The star pagoda formerly rated in United States customs at \$1.84. Its real value is \$1.9102. The gold mohur of Madras = \$7.0696.

3. BOMBAY PRESIDENCY.

Length.—16 tussoos make 1 hath or cubit, = 18.12 inches.

24 " " 1 guz " yard, = 27.18 "

At Guzerat, the guz = 23½ inches. The hath, haut, or covid, at Surat, = 20.9 inches; at Ahmednuggur, 14 inches.

Surface.—The biggah = 0.6074 acre.

Capacity.—16 adoulies make 1 parah.

8 parahs " 1 candy, = 25 bushels.

At Anjar 4 mapp make 1 shye, = 0.88243 bushel.

At Mangalore the mudi = 1.3019 bushels.

Weights.—30 pice or 72 tanks make 1 seer.

40 seers " 1 maund, = 28 lbs.

20 maunds " 1 candy, = 560 "

At Surat the candy = 340.16 lbs.; at Ahmednuggur, 1577.14 lbs. The maund is 26.23 lbs. at Anjar, 75.87 lbs. at Aurungabad, 79.78 lbs. in the Deccan, and 89.74 lbs. at Gujerat. For pearls the ruttee = 3 grains.

Money.—100 reas make 1 quarter.

4 quarters or 16 annas make 1 rupee, = \$0.46217.

100,000 is a lac, and 10,000,000 a crore of rupees. The gold mohur of Bombay = \$7.1061.

4. PONDICHERRY.

The covid = 18 inches.

The garce = 103.967 bushels.

The maund = 25.9 lbs., the candy = 588.04 lbs.

For gold and silver, the nello = 0.37 grains.

The gold moon pagoda = \$1.6015.

5. GOA.

The covado or cubit = 26.8 inches.

The maund = 24.75 lbs.; the candy or bahar = 495 lbs.

Portuguese weights and measures are somewhat used.

Ionian Islands.

With the exception of some scattered weights and measures of Italian or of Turkish origin, the British standards have been adopted.

Length.—The Jarda Ionia = 1 yard. The stadio = 22 yards.

Liquid Measure.—The dicotoli = 1 imperial pint; the gallone = 1 imperial gallon; the barile = 16 imperial gallons.

Dry Measure.—The chilo = 1 imperial bushel.

Weight.—The libbra sottile = 1 lb. troy; the libbra grosso = 1 lb. avoirdupois; the centinajo or talento = 100 lbs. avoirdupois. In old weights, the oke = 2.6998 lbs.; the cantaro = 118.8 lbs.

Money.—104 oboli = 1 Spanish dollar.

Ireland. See GREAT BRITAIN.

Italy.

For former local systems of coinage, weights, and measures, see MODENA, PARMA, ROMAN STATES, NAPLES, SARDINIA, VENETIAN LOMBARDY, and TUSCANY.

For weights and measures, the French metric system is employed.

The monetary system is also like that of France, the lira being the equivalent of the franc.

The present value of the lira in United States customs is \$0.1930.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.
20 lire. Legal rate.....	Gold.	\$3.8591

Jamaica. See WEST INDIES.

Japan.

Length.—The inc = 6.25 feet, or 1.906 metres.

The sals = 11.9291 inches, or 0.303 metre.

Capacity.—5 itchigau make 1 gonghau.

2 ghongau " 1 ischiomassé.

10 ischiomassé " 1 ittommá (or sjoo?).

The itchigau is about 1.68 litres, or 1.775 quarts.

Weight.—The monme = 27.007 grains. The rjoo = 116½ grains, or 7.525 grammes.

Money.—Gold and silver ingots, whose value varies with the demand, are used in circulation; also coins of varying values, those of brass and copper having central holes. The chief value in commerce now is the yen, the equivalent of our trade dollar, and which is received in the United States customs (1874) at \$0.997. The kobang, itzebu, and itakane, are no longer coined.

COIN TABLE.

Java.

Old Dutch weights and measures are somewhat in use. Other weights and measures vary, having, perhaps, one value at Bantam, and another at Batavia.

Length.—The covid = $\frac{3}{4}$ of a yard. Other units are old Dutch.

Capacity.—The kanne = 0.394 gallon. The legger, for arrack, = 160.0 gallons.

The bambou, at Bantam, = 0.09223 bushel, and the koyang = 147.566 bushels. At Batavia the koyang = 62.432 bushels. This measure is for rice.

Weight.—10 catties make 1 gantang (for coffee); 100 catties make 1 pecul. The pecul = 135.6312 pounds. The bahar at Bantam = 396 lbs., that used for pepper = 406.78 lbs.; at Batavia its value is 610.17 lbs. The timbang, for grain, = 677.9625 lbs. At Bantam the tael = 0.1511 lb., and at Batavia it equals 0.0847 lb.

Money.—See NETHERLANDS. Prior to January 1, 1874, the rix-dollar of Batavia was rated in United States customs at 75 cents. It is divided into 48 stivers.

Liberia.

Weights, measures, and money, like the United States.

The dollar of Liberia rates in United States customs at \$1.00.

Lombardy. See VENETIAN LOMBARDY, and ITALY.**Lubeck.** See also GERMAN EMPIRE.

Length.—12 punkte = 1 linie; 6 linien = 1 zoll; 12 zoll = 1 fuss; 2 fuss = 1 elle. The fuss = 11.335 inches.

Liquid Measure.—2 ort = 1 planke; 2 planken = 1 quartier; 2 quartier = 1 kanne; 2 kannen = 1 stübchen; 2 stübchen = 1 viertel; 5 viertel = 1 anker; 4 anker = 1 ahm; 6 ahm = 1 fuder. The eimer is $\frac{4}{3}$, and the oxhoft 30 viertel. The viertel = 1.9787 gallons.

Dry Measure.—(For wheat.) 4 fass = 1 scheffel; 4 scheffel = 1 tonne; 3 tonnen = 1 drömt; 8 drömt = 1 last. The scheffel

= 1.007 bushels. For oats and fruit, the scheffel = 1.1213 bushels.

Weights.— $\frac{1}{4}$ pfennige = 1 quentchen : $\frac{4}{5}$ quentchen = 1 loth; $\frac{1}{2}$ loth = 1 unze; 3 unzen = 1 mark; $\frac{1}{2}$ mark = 1 pfund. The pfundi = 1.04874 lbs.

Money.— $\frac{1}{4}$ pfennige = 1 schilling; 16 schilling = 1 mark (Hamburg standard). The former gold ducat = \$2.271, and the silver thaler of $\frac{1}{2}$ mark = \$0.723.

Madagascar.

But little is known of the weights and measures of this island.

Length.—The ralif = 46.46 inches, or 1.18 metres. In the northern part of Madagascar its value is double this.

Capacity.—The bamboo = 0.0563 bushel.

Weight.—For gold and silver, 3 manki = 1 vari; 2 vari = 1 sompi. The sompi = 60 grains.

Madeira Islands. See PORTUGAL.

Some of the standards vary slightly from those of the mother country. The libra = 1.011 lbs. For wine, the pipa = 110 gallons. Prior to 1873 the milrea of Madeira rated in United States customs at \$1.00.

Malabar Coast. See INDIA.

Malacca. Including STRAITS SETTLEMENTS.

Length.—At Singapore the covid or hasta = 18 inches. Another covid = 18.0529 inches. The jumba = 14.4 inches.

Surface.—The orlong = 1.3223 acres.

Weight.—100 catties = 1 pecul ; 3 peculs = 1 bahar or candy. The catty = 1.35 lbs.; that used for gold and silver, 2.049143 lbs. The mace, or miam = 44.83 grains; at Singapore, 52 grains. The buncal, for gold (Singapore), = 822 grains. For tin, the tampang (an equivalent of the catty) = 1.356 lbs.; and the kip = 40.678 pounds.

Malay Archipelago. See BORNEO, CELBES, JAVA, SUMATRA, the MOLUCCAS, etc.

Malta.

Length.—The canna = 8 palmi of 10.3 inches each. The foot = 11.17 English inches.

Capacity.—For oil, the caffiso = 5.499 gallons. For wine, the barile = 10.997 gallons. For corn, the salma = 8.224 bushels.

Weight.—The libbra or rottolo = 1 $\frac{1}{4}$ lbs. The cantaro = 100 rottoli.

Money.—20 grani = 1 taro; 12 tari = 1 scudo. The scudo of Malta used to rate in United States customs at 40 cents. 30 tari = 1 Sicilian dollar. Both dollars and doubloons circulate. The former gold doppia or pistole of 10 scudi (before 1800) was worth \$4.6512; and the silver oncie (also before 1800) was worth \$1.6955.

Manilla. *See* PHILIPPINE ISLANDS.

Marquesas Islands. Now a FRENCH COLONY.

Martinique. *See* WEST INDIES.

Mauritius.

The weights and measures of Great Britain, and also those of the metric system, are used.

Money.—The current dollar of 100 cents. In public accounts the pound sterling is the standard. The Spanish dollar, French napoleon of 20 francs, and East India rupees, are also in circulation.

Mecklenburg. *See also* GERMAN EMPIRE.

The weights and measures are those of Hamburg; except in the case of measures of capacity, which come from Lübeck.

Mexico.

The weights and measures are Spanish, with many local variations. The metric system is now legal.

In length, the vara = 32.9 inches. In liquid measure, the frasco = 2 $\frac{1}{2}$ quarts, and the baril = 20 gallons. In dry measure, the fanega = 1.55 bushels.

Weight.—25 libra = 1 arroba; 4 arrobas = 1 quintal. The tercio = 160 libra. The libra = 1.01418 lbs.

MOCCHA.

Money.—Formerly, the dollar was divided into 8 reals; now, the usual division into 100 cents is employed. The dollar is rated in United States custom-houses at \$1.0475.

COIN TABLE.

COINS.	Material.	Weight	Fineass.	Value.

Mocha. See ARABIA.

Modena. See also ITALY.

Length.—6 piede = 1 cavezzo. The piè = 20.593 inches. The braccio = 22.741 inches.

Surface.—36 square piede = 1 square cavezzo; 4 square cavezzi = 1 tavola; 72 tavole = 1 biolca. The biolca = 0.7009 acre.

Liquid Measure.—2 boccali = 1 fiasco; 20 fiasci = 1 barile. The fiasco = 0.55028 gallon.

Dry Measure.—2 staja = 1 sacco. The stajo = 1.9978 bushels.

Weight.—16 ferlini = 1 oncia; 12 oncie = 1 libbra or lira. The libbra = 0.7044 lb.

Money.—15 lire Modenesi = 1 scudo. The scudo = \$0.8055.

Moldavia. See ROUMANIA.

Molucca Islands.

The chief islands are GILOLO, AMBOYNA, CERAM, TERNATE, and the BANDA group. Being under control of the Netherlands, the

modern Dutch weights and measures are somewhat used. Still, there are other standards resembling those of Java, Sumatra, etc.

In AMBOYNA, the bahar = 597.61 lbs., the mace = 28½ grains, and the tael = 455.8 grains. Hence, 16 mace = 1 tael. The koyang = 55.3371 bushels.

In TERNATE, the catty = 1.3017 lbs.

Montenegro.

Coinage, weights, and measures, of the neighboring countries.

Montserrat. See WEST INDIES.

Morocco.

Length.—The codo, covid, covado, cadee, or dhra'a, as given by different authorities, varies from 19.85 to 22.48 inches. Perhaps 20.92 inches, or 0.5313 metre, is the best value. The pic = 26 inches.

Capacity.—The muhd or mud = 5.184 bushels.

Weight.—100 rotl = 1 cantaro. The rotl of commerce = 1.19 lbs.; that of the markets = 1.7 lbs.

Money.—Spanish dollars and doubloons circulate.

The gold boutki or bendoki = \$1.9952. The silver rial of 1776 = \$1.0449.

Muscat.

Length.—The covid = 39.13 inches.

Capacity.—34 sidios = 1 ferren. The ferren = 7.9254 gallons.

Weight.—24 kotschas = 1 maund; 60 maunds = 1 candy. The maund = 8½ lbs.

Money.—As in Persia and Arabia.

Naples. See also ITALY.

Length.—5 minuti = 1 oncia; 12 oncie = 1 palmo; 8 palmi = 1 canna. The palmo = 10.381 inches. 7½ palmi make 1 per-tica or passo.

Road Measure.—The miglio of 7,000 palmi = 1.147 miles.

Surface.—The moggio of 50,625 square palmi = 0.8584 acre.

Liquid Measure.—60 caraffi = 1 barile; 12 barile = 1 botta, 2 botti = 1 carro. The caraffa = 0.1929 gallon. This scale is

for wine and spirits. For oil, 6 misurelle = 1 quarto; 16 quarti = 1 stajo; 16 staja = 1 salma. The stajo is sometimes divided into 20 pignate. The stajo = 2.61633 gallons.

Dry Measure.—24 misure = 1 tomolo; 36 tomoli = 1 carro. The tomolo = 1.5646 bushels.

Weight.—In general commerce the rotolo of $2\frac{7}{8}$ libbre is used, the libbra = 0.70722 lb. avoirdupois. The same libbra occurs in the following tables :

1. Weight for gold, silver, silk, spices, drugs, and colors. 20 accini = 1 trapeso; 3 trapesi or scrupoli = 1 dramma; 10 drammæ = 1 oncia; 12 oncie = 1 libbra.

2. Apothecaries' weight. 20 accini = 1 scrupolo; 3 scrupoli = 1 drachma; 10 drachmæ = 1 oncia; 12 oncie = 1 libbra.

Money.—10 grani = 1 carlino; 2 carlini = 1 taro; 5 taro = 1 ducato.

The ducat, by United States law of 1846, rated at 80 cents.

The gold onetta, or 3-ducati de regno, = \$2.5067. The silver ducato = \$0.8265. Scudo or piastre, of 12 carlini, = \$0.992; or, by United States mint assay, \$0.9437.

Natal. See CAPE OF GOOD HOPE.

Netherlands. *Colonial Possessions:* JAVA, SUMATRA, parts of BORNEO, BANCA, CELEBES, the MOLUCCAS, other smaller islands in the EAST INDIES, and part of NEW GUINEA. In America, DUTCH GUIANA, CURAÇOA, and other WEST INDIA ISLANDS.

Since 1817 the weights and measures of Holland have been of the metric system; merely some of the old Dutch names have been retained. Compare FRANCE.

Length.—The streep or millimetre, duim or centimetre, palm or decimetre, el or metre, roede or decametre, and mijle or kilometre. Before 1817 the voet was a measure of 11.15 inches, and the old Amsterdam el was 27.08 inches.

Surface.—The vierkante roede or are, and the bunder or hectare.

Liquid Measure.—The vingerhoed or centilitre, maatje or decilitre, kan or litre, and vat or hectolitre.

Dry Measure.—The maatje or decilitre, kop or litre, schepel or decalitre, mudde or hectolitre, scheepston (wisse) or kilolitre, and last or 30 hectolitres.

Weight.—The korrel or decigramme, wigtje or gramme, lood or decagramme, ons or hectogramme, Niederlandsch pond or kilogramme, and centnaar of 100 kilogrammes.

In apothecaries' weight a pond of 375 grammes is subdivided into ounces, drachms, scruples, and grains, exactly as in the United States and Great Britain.

Money.—5 cents make 1 stiver.

20 stivers " 1 florin or guilder, = \$0.4084.

50 stivers " 1 rijksdaaler.

Formerly, 12 groot made 1 schilling. In United States customs the florin now rates at \$0.405. Formerly it rated at \$0.40.

COIN TABLE.

New Granada. *See COLOMBIA.*

New South Wales. *See AUSTRALIA.*

New Zealand. Same as AUSTRALIA.

Nicaragua. *See CENTRAL AMERICA.*

Norway. (*See SWEDEN* for modern system.)

Length.—12 linie make 1 tum.

12 tum	"	1 fot, = 11.6904 inches, or 0.297 metre.
2 fot	"	1 aln.
3 aln	"	1 famn.
5 "	"	1 rode.

Road Measure.—The mül of 36,000 fot, and grenzmül of 30,000 fot. The latter = 5.5352 miles.

Surface.—The tunna or töndeland = 56,000 square fot. 4 kappland = 1 fjerding; 4 fjerding = 1 spannland; 2 spannland = 1 töndeland. The töndeland = 1.2132 acres.

Solid.—1 vedfamn = 108 cubic fot, or 99.855 cubic feet.

Liquid Measure.—

4 jungfrus	make 1 qwarter.
4 qwarters	" 1 stop.
2 stops	" 1 kanna, = 0.69106 gallon, or 2.617 litres.
48 kannas	make 1 tunna.

Dry Measure.—

4 orts	make 1 qwarter.
4 qwarters	" 1 stop.
2 stops	" 1 kanna.
7 kannas	" 1 fjerding.
4 fjerdings	" 1 span, = 2.0786 bushels, or 73.2419 litres.
2 spans	make 1 tunna.

The tunna also = 32 kappe.

Weight.—4 qwintin make 1 lod.

2 lod " 1 untz.

16 untz " 1 skälpund, = 0.9378 lb.

This pund is divided into 8,848 as.

20 skälpunds make 1 lispund.

400 " 1 skippund.

Apothecaries use a pund of 7,416 as, which is divided into untzs, drachmas, scrupels, and grans, as in England.

For gold and silver, the mark, of 4,384 as, is divided into 8 untzs, 16 lods, and 64 qwintins.

Money.—12 runstycken make 1 skilling.

120 skilling " 1 riksdaler, = \$1.0929.

Former value of the riksdaler in United States custom-houses, \$1.06. The crown now rates (Secretary of the Treasury, 1874) at \$0.268.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value. "

Nova Scotia. *See CANADA.*

Nubia. *See EGYPT.*

Oldenburg. *See also GERMAN EMPIRE.*

The former gold pistole = \$3.9593.

Ottoman Empire. *See TURKEY.*

Palestine. *See TURKEY.*

Paraguay.

The peso of Paraguay rates in United States customs at \$1.00.
Weights and measures of Spanish origin.

Parma. *See also ITALY.*

Length.—12 atomi = 1 punto; 12 punti = 1 oncia; 12 oncie = 1 braccio di legno; 6 braccia = 1 pertica. This braccio = 21.344 inches. The piè is a measure of 22.428 inches.

Surface.—12 tavola = 1 staro; 6 stari = 1 biolca of 288 square pertica. The biolca = 0.7528 acre.

Liquid Measure.—As at Milan. *See VENETIAN LOMBARDY.*

Dry Measure.—8 quarteroli = 1 mina; 2 mine = 1 stajo or staro. The stajo = 1.334 bushels.

Weight.—24 grani = 1 denaro; 24 denari = 1 oncia; 12 oncie = 1 libbra; 25 libbre = 1 rubbio. The libbra = 0.7197 pound.

Money.—The gold sequin, or zecchino, = \$2.2691. Gold pistole = \$4.2676. Gold 20-lire = \$3.8591. Silver ducato (prior to 1815) = \$0.9933.

Persia.

No regular system of weights and measures applies to the whole country.

Length.—The archin arisch = 38.28 inches, and the archin schah = 31.46 inches. At Ispahan, the guerze or gueza = 37.39 inches, or 0.949 metre.

Capacity.—4 sextarios make 1 chenica.

2 cheniccas “ 1 capicha.

25 capichas “ 1 artaba, or arta, = 1.8514 bushels, or 65.236 litres.

The artaba also equals 8 collothun.

Weight.—2 mascais make 1 dirhem.

50 dirhems. “ 1 rattel.

6 rattels “ 1 batman.

In Tauris the batman = 6.3408 lbs.; in Shiraz its value is double the above. In Ispahan, the mahnd shah = 13.6601 lbs.; while in Shiraz, Bushire, and Gamri, its value is 27.3202 lbs. In Teheran, the rik of 1,600 miskal = 17.075 lbs.

Money.—5 dinars make 1 kasbequis.

2 kasbequis “ 1 dinar-bisti.

5 dinars-bisti “ 1 shatree.

2 shatrees “ 1 mahmoodi.

2 mahmoodis “ 1 abassi.

50 abassi “ 1 tomaun. In gold, = \$2.2437.

There is also a half-tomaun in gold. In silver, the sahibkiran of Mohammed Shah = \$0.2243; but this coin varies in value under different rulers.

Peru.

Weights and measures of Spanish origin.

The vara = 33.367 inches. The libra = 1.014286 lbs., the quintal = 100 libra, and the fanega = 140 libra.

Money.—A system based on the French was adopted in 1863. In it the sol (divided into 100 cents) is the equivalent of 5 francs. In United States customs the sol now rates at \$0.9650.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.

Philippine Islands. (Colony of SPAIN.)

The pecul = 139.45 lbs.

The caban of rice = 133 lbs.; of cocoa, 83½ lbs.

Poland. See RUSSIA, AUSTRIA, and PRUSSIA.

The former standards of Krakau (Cracow, in Austrian Poland) are worth partially citing.

Length.—The stopa (of 12 calow, etc.) = 14.032 inches.

Liquid Measure.—The garniec = 0.99145 gallon. That of Warsaw was 1.05671 gallons.

Dry Measure.—The korzec = 3.4082 bushels. At Warsaw, 3.6324 bushels.

Weight.—The funt (of 2 mark or 48 skoycic) = 0.895 lbs.

Money.—The former gold ducat (25 zloty) = \$2.9887.

The silver zloty = \$0.1146. There were also pieces of 2, 5, and 10 zloty.

Porto Rico. *See WEST INDIES.*

Portugal. Colonial Possessions.—The MADEIRA, AZORES, and CAPE VERDE ISLANDS, ISLAND OF ST. THOMAS, parts of GUINÉA, MOZAMBIQUE, GOA, and other cities in INDIA, MACAO in CHINA, TIMOR and other islands in the MALAY ARCHIPELAGO.

The metric system has lately been adopted. The old style was as follows:

Length.—12 pontos make 1 linha.

12 linhas " 1 pollegada.

8 pollegadas " 1 palmo da craveira.

3 palmos " 1 covado.

5 palmos " 1 vara, = 43.28 inches, or 1.099 metres.

2 varas " 1 braça.

The grao = 2 linhas, and the dedo = 8 linhas.

Road Measure.—8 estadios make 1 milha, = 1.2786 miles.

3 milhas " 1 legoa.

Surface.—The geira is 4,840 square varas, = 1.4287 acres.

Cubic.—Timber is measured in cubic pollegadas, earth in cubic braças, brick and stone work in cubic palmas.

Liquid Measure.—

4 quartilhos make 1 canada.

6 canadas " 1 alquiére, pote, or cantaro.

2 alquiéres " 1 almude.

In Lisbon the alquiére = 2.18475 gallons, or 8.6299 litres.

" Oporto " " = 3.31279 " " 12.5399 "

26 almude make 1 pipa or bota.

2 pipas " 1 tonelada.

Dry Measure.—

2 maquias	make 1 outava.
2 outavas	" 1 quarto.
4 quartos	" 1 alquiére.
4 alquiéres	" 1 fanga.
15 fangas	" 1 moio.

The fanga of Lisbon = 1,5347 bushels, or 54.0768 litres.

" " " Oporto = 1.9374 " " 62.2663 "

For coal, in Lisbon, the fanga = 21.1667 bushels.

Weight.— 24 graos make 1 scrupulo.

3 scrupulos	" 1 outava.
8 outavas	" 1 onça.
16 onças	" 1 arratel, = 1.01186 lbs., or 459 grammes.
32 arratels	" 1 arroba.
4 arrobas	" 1 quintal.
13½ quintals	" 1 tonelada.

For gold and silver, a marco of $\frac{1}{2}$ arratel is used. Apothecaries have a libra of 12 onças, or $\frac{1}{2}$ arratel.

Money.— The rei is an imaginary money of account, the sum of 1,000 reis being called a milreis. A million of reis is a conto of reis.

20 reis	make 1 vintem.
100 " "	1 tostao or testoon.
320 " "	1 pataça.
400 " "	1 crusado.
480 " "	1 sello or new crusado.
1,000 " "	1 milreis.

The milreis now rates in United States customs at \$1.0847.

The British pound rates in Portugal at 4,500 reis, and the French franc at 180 reis.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.
Coroa. (Crown, 5,000 reis.).....	Gold.	\$5.8257
" By U. S. mint assay.....	"	147.84	912	5.8070
Milreis.....	Silver.	1.0515
500 reis. By U. S. mint assay.....	"	192.00	912	0.4860

Prince Edward's Island. *See CANADA.*

Prussia. *See also GERMAN EMPIRE.*

Length.—12 scrupel = 1 linie; 12 linien = 1 zoll; 12 zoll = 1 Rheinfuss. This fuss = 12.357 inches, or 0.3138 metre. 12 Rheinfuss = 1 ruthe. The elle = $2\frac{1}{2}$ fuss. Surveyors divide the ruthe decimaly into 10 decimal fuss, 100 zoll, and 1,000 linien.

Road Measure.—The postmeile of 24,000 Rheinfuss = 4.6807 miles, or 7.532721 kilometres.

Surface.—The morgen of 180 square ruthen = 0.6309 acre.

Liquid Measure.—2 össel = 1 quartier; 30 quartier = 1 anker; 2 anker = 1 eimer; 2 eimer = 1 ohm; 6 ohm = 1 fuder. The anker = 9.07319 gallons, or 34.345 litres.

Dry Measure.—4 mässchen = 1 metze; 4 metzen = 1 viertel; 4 viertel = 1 scheffel; 12 scheffel = 1 malter; 6 malter = 1 last.

The wispel = 18 scheffel. The scheffel = 1.5597 bushels, or 54.9577 litres.

Cubic Measure.—The kloster = 108 cubic Rheinfuss, = 117.8 cubic feet. The haufen = $4\frac{1}{2}$ kloster.

Weight.—Formerly, the pfund (= 1.03118 lbs. avoirdupois) was divided into marks, unzen, loth, and quentchen, as in most of the other German states (for example, Hanover and Hamburg). This pfund was represented by $\frac{1}{66}$ of a cubic Rheinfuss of distilled water, weighed *in vacuo*, at the temperature of $65\frac{1}{4}$ Fahr. $16\frac{1}{2}$ pfund made 1 liespfund, and 20 liespfund made 1 schiffpfund. 22 pfund made the stein, and 5 stein the centner. The more modern scale is as follows :

10 zent = 1 quentchen; 10 quentchen = 1 loth; 30 loth = 1 pfund; 100 pfund = 1 centner; 3 centner = 1 tonne. This pfund is the Zollverein pfund of 500 grammes, or 1.1023 lbs.

For gold and silver, the mark of $\frac{1}{2}$ the old pfund is divided into 16 loth or 288 gran.

Apothecaries' weight as in Nuremberg. *See GERMAN EMPIRE.*

Money.—For recent system, *see GERMAN EMPIRE.* Formerly, 12 pfennige made 1 groschen, 30 silbergroschen made 1 thaler. Still earlier, the thaler was divided into 24 gute groschen. The thaler equals in weight $\frac{1}{14}$ of a Cologne mark of fine silver.

COIN TABLE.

Queensland. See AUSTRALIA.

Roman States. See also ITALY.

Length.—The commercial palmo = 8.796 inches; the mercer's palmo = 8.347 inches; the architect's palmo = 8.79 inches. The pié = 11.592 inches; at Ancona, 15.384 inches. The canna = 78.4 inches, the braccio of Rome = 30.732, and the braccio of Ancona = 25½ inches. Architects divide their palmo into 12 oncie of 10 decimi each; 10 of these palmi make 1 canna, and the catena of 10 stajoli is 57½ palmi. There is also an architect's pié or foot of 16 oncie, = 11.72 inches.

Surface.—The rubbio of 370,300 square architect's palmi = 4,5658 acres. It has various subdivisions.

Liquid Measure.—4 quartucci = 1 foglietta; 4 fogliette = 1 boccale; 32 boccale = 1 barile; 16 barile = 1 botte. For wine, the barile = 15.412, and for oil 15.185 gallons. In Bologna, 4 fogliette = 1 boccale; 15 boccale = 1 quarterone; 4 quarterone = 1 corba. This boccale = 0.346 gallon. The soma = 18.49 gallons at Ancona, and 43.386 gallons at Rome.

Dry Measure.—4 quartucci = 1 scorzo; 1½ scorzi = 1 starello; 4 starelli = 1 quarta; 4 quarte = 1 rubbio. At Rome, the

rubbio = 8.355 bushels; at Ancona, 7.974 bushels. In Bologna, 4 quarticini = 1 quarterone; 4 quarterone = 1 stajo; 2 staja = 1 corba. This corba is the same as in liquid measure, and = 2.232 bushels (20.7617 gallons, liquid).

Weight.—24 grani = 1 denaro; 24 denari = 1 oncia; 12 oncie = 1 libbra. In Bologna, 4 grani = 1 carato; 10 carati = 1 ferlino; 2 ferlini = 1 ottavo; 8 ottavi = 1 oncia; 12 oncie = 1 libbra. The libbra = 0.7477 lb. at Rome, 0.7984 at Bologna, and 0.7277 at Ancona.

Money.—10 bajocchi = 1 paolo; 10 paoli = 1 scudo. The scudo (of 1835) = \$1.0465. The Madonna scudo of Bologna = \$1.0445. In gold, the 10 scudi Romani of 1853 = \$10.47; and the zecchino of Rome and Bologna prior to 1835 = \$2.276. A modern piece of 2½ scudi, by United States mint assay, is worth \$2.6047.

Roumania. (MOLDAVIA and WALLACHIA.)

Length.—The palma = 10.89 inches. The khalebi, for woolens, = 26.43 inches, and the kot, for silk and linen, = 24.86 inches. The endaseh is 26.08 inches.

Capacity.—The viadra of 10 oka = 3.7434 gallons, or 14.1699 litres. The kilo = 12.845 bushels, or 434.98 litres.

Weight.—4 litra = 1 oka or occha; 44 okas = 1 cantaro. The oka = 2.818 lbs., or 1.2786 kilogrammes.

Money.—100 ban para = 1 piastre or lei. The lei is meant to be the equivalent of the franc. The silver piece of 2 lei, by United States mint assay, weighs 154.56 grains, is 835 fine, and worth \$0.358.

Russia.

Length.—12 linia make 1 duime.

12 duimes “ 1 foute, = 1 English foot, or 0.304761 metre.

7 foutes make 1 sagéne, sashen, or sachine.

4 verschoks make 1 tchetverk.

4 tchetverk “ 1 archeen, archine, or arsheen.

3 archines “ 1 sachine, = 7 feet, or 2.1885 metres.

Road Measure.—The verst or werst = 500 sachsen, or 3,500 feet. The Lithuanian meile = 4.9958 miles, or 8.039816 kilometres.

Surface.—The deciatine = 2,400 square sachsen, or 2.6997 acres.

Liquid Measure.—100 tcharkas = 1 vedro; 3 vedros = 1 anker; 40 vedros = 1 sarakowaja. The vedro = the volume of 750.57 cubic inches of distilled water, or 30 pounds weighed *in vacuo* at the temperature of $16\frac{3}{4}$ ° Centigrade.

2 quars	make 1 polou-stoff.
2 polou-stoffs	" 1 stoff.
4 stoffs	" 1 polou-vedro.
2 polou-vedros	" 1 vedro.

The kronchka is $\frac{1}{10}$ vedro. The vedro = 3.249 gallons, or 12.299 litres.

Dry Measure.—

2 garnetz	make 1 tschetverka.
4 tschetverkas	" 1 tschetverik.
2 tschetveriks	" 1 pajak.
2 pajaks	" 1 osmina.
2 osminas	" 1 tschetvierkt, or chetvierkt.

The tschetverik = 0.7446 bushel, or 26.2367 litres.

Weight.—96 dolis make 1 zolotnick.

3 zolotnicks	" 1 loth.
8 "	" 1 lana.
12 lanas	" 1 funte, = 0.9028 lb., or 0.4095 kilogramme.
40 funtes	" 1 pood or pud.
10 poods	" 1 berkowitz or berkovetz.
3 berkovetz	" 1 packen.

In pharmacy, the funte is $\frac{5}{8}$ of the commercial funte, and is subdivided, as in England and Germany, into ounces, drachms, scruples, and grains.

Money.—100 copecks make 1 ruble or rouble. The ruble = \$0.7779; or, in United States customs (1874), \$0.7717. Before 1800 the ruble was of somewhat greater value.

Length.—12 atomi = 1 punto; 12 punti = 1 oncia, 12 oncie = 1 piede liprando. This piede = 20.228 inches. In Genoa there is a più manuale = $\frac{2}{3}$ the above. In the same city, $5\frac{1}{2}$ oncie = 1 palmo; $2\frac{1}{2}$ palmi = 1 braccio; and about 9 palmi = 1 canna. In Turin and Piedmont generally, 6 piede liprando = 1 trabucco; 2 trabucci = 1 pertica. The raso = 14 oncie.

Road Measure.—The miglio (4333 $\frac{1}{4}$ piede liprando) = 1.3835 miles.

Surface.—In Piedmont the giornata of 100 square pertica = 0.9393 acre.

Liquid Measure.—In Genoa, 90 amole or 50 pinte = 1 barile; 2 barili = 1 mezzaruola. This barile = 17.084 gallons.

In Piedmont (Turin), 2 quartini = 1 boccale; 2 boccali = 1 sinta; 6 pinte = 1 rubbio; 8 rubbi = 1 brenta; 10 brente = 1 carro. The rubbio = 2.4804 gallons.

Dry Measure.—In Genoa, 12 gombette = 1 quarto; 8 quarti = 1 mina. The mina = 3.4257 bushels.

In Turin, 20 cucchiari = 1 copello; 4 copelli = 1 quartière; 2 quartière = 1 mina; 2 mine = 1 stajo; 3 staje = 1 sacco. The sacco = 3.2635 bushels.

Weight.—In Genoa, 24 grani = 1 denaro; 24 denari = 1 oncia; 12 oncie = 1 libbra; $1\frac{1}{2}$ libbre = 1 rottolo. The libbra = 0.70021 lb.; in *peso grosso* it is $\frac{1}{10}$ higher.

In Piedmont (Turin), 24 granotini = 1 grano; 24 grani = 1 denaro; 3 denari = 1 ottavo; 8 ottavi = 1 oncia; 12 oncie = 1 libbra. This libbra = 0.81332 lb. The marco, for gold and silver, is $\frac{2}{3}$ libbra. The apothecaries' libbra is $1\frac{1}{2}$ marco. *

Money.—100 centesimi = 1 lira nuova. The lira = \$0.193. The silver livre of Genoa formerly rated in United States custom-houses at 21 cents.

Former Coinage.—In Genoa, the gold zecchino or sequin, coined for the Levantine trade, = \$2.2906. The gold dopia or Genovine, old, = \$23.5913; new, = \$14.9082. The doppie (20 lire nuove) of Sardinia = \$3.8591. The carlino of Piedmont (1786) = \$27.4582; of Sardinia (1773) = \$9.4586. The silver scudo (6 lire Piedmontese), before 1800, = \$1.3689. The scudo or scutcheon dollar of Sardinia (2½ lire of S.), 1773, = \$0.9091.

Saxony. See also GERMAN EMPIRE.

Length.—10 linien = 1 zoll; 12 zoll = 1 fuss; 2 fuss = 1 elle; 8 ellen = 1 ruthe. The fuss = 11.148 inches, and the architect's fuss of Leipsic = 11.13 inches.

Road Measure.—The postmeile (24,000 fuss) = 4.223 miles. The polizei-meile (32,000 fuss) = 5.6303 miles.

Surface.—The morgen of 76,800 square fuss = 1.5216 acres.

Liquid Measure.—4 quartier = 1 nössel; 2 nössel = 1 kanne; 63 kannen = 1 eimer; 2 eimer = 1 ohm; 6 ohm = 1 fuder. Also, 54 kannen = 1 anker; 3 eimer = 1 oxhoft; 5 eimer = 1 fass. The kanne = 0.3181 gallon. In Dresden the measures are $\frac{1}{2}$ smaller than the above, which belong to Leipsic.

Dry Measure.—4 mässchen = 1 metze; 4 metzen = 1 viertel; 4 viertel = 1 scheffel; 12 scheffel = 1 malter; 2 malter = 1 wispel. The scheffel = 2.9485 bushels.

Weight.—15 gran = 1 pfennig; 4 pfennige = 1 quentlein; 4 quentlein = 1 loth; 2 loth = 1 unze; 8 unzen = 1 mark; 2 mark = 1 pfund. The pfund = 1.0306 lbs. The centner = 110 pfund. For apothecaries' weight, see GERMAN EMPIRE.

Money.—12 pfennige = 1 neugroschen; 30 neugroschen = 1 thaler. Values as in Prussia.

The former August d'or (and double August d'or in same proportion) = \$4.0098. The former specie-thaler of 24 gute groschen (1 $\frac{1}{2}$ thaler) = \$1.091.

Sennaar. See EGYPT.

Servia.

Length.—The archine = 28.0 inches, or 0.711 metre.

Weight.—100 drachm = 1 litra; 4 litra = 1 oka. The oka = 2.8188 lbs, or 1.2786 kilogrammes.

Money.—80 para = 1 piastre. The piastre = \$0.0794.

Siam.

Length.—2 soks make 1 ken.

2 kens " 1 vouah, = 6.306 feet, or 1.922 metres

Road Measure.—The röenung of 2,000 vrouahs = 2.3886 miles, or 3.84401 kilometres.

Capacity.—

40 sats make 1 sesti, = 0.33462 bushel, or 11.7908 litres.

40 sesti " 1 cohi.

In liquid measure the cohi = 13.385 gallons, or 50.6662 litres.

Weight.—

4 ticals make 1 tael.

20 taels " 1 catty.

50 catties " 1 pecul, = 133.35 lbs., or 60.488 kilogrammes.

Money.—Gold ticals, each equal to 10 silver ticals. The latter is worth about 61 cents, United States coinage.

Siberia. *See RUSSIA.*

Sicily. *See also NAPLES, and ITALY.*

Length.—8 palmi = 1 canna. The palmo = 9.5297 inches.

Liquid Measure.—The salma = 22 gallons.

Dry Measure.—The salma generale = 7.8 bushels; the salma grosso = 10 bushels.

Weight.—The libbra of 12 oncie = 0.70723 lb. The rottolo grosso of 33 oncie = 1.925 lbs.; the rottolo sottile of 30 oncie = 1.75 lbs.

Money.—20 grani = 1 taro; 12 tari = 1 scudo; 2½ scudi = 1 oncia. The silver Sicilian scudo of 1785 = \$0.9833. Prior to 1873 the oncia rated in United States custom-houses at \$2.40.

Sierra Leone. (British Colony.)

Society Islands. (French Colony.)

Sooloo Archipelago.

The mace = 58.33 grains. The tael = 0.0833 lb. The lachse = 66½ lbs., or 30.236 kilogrammes.

Soudan. *See EGYPT.*

South Australia. *See AUSTRALIA.*

Spain. *Colonial Possessions.*—CANARY ISLANDS, CUBA, PORTO RICO, etc.; PHILIPPINE ISLANDS, part of NEW GUINEA. *See also* BALKARIC ISLANDS.

The metric system of weights and measures is now the legal system. Its units have Spanish names, however, as "litro," "metro," etc. The following tables belong to the old system, as used in Madrid :

Length.—12 puntos = 1 linea; 12 lineas = 1 pulgada; 6 pulgadas = 1 sesma; 2 sesmas = 1 pié (foot); 3 piés = 1 vara; 4 varas = 1 estadal. The pié = 11.128 inches; also, 9 lineas = 1 dedo; 12 dedos = 1 palma.

Road Measure.—The legua of 8,000 varas = 4.2151 miles.

Surface.—The Yugada, of 50 fanegadas, or 460,800 square varas, = 79.355 acres.

Liquid Measure.—4 copas = 1 quartillo or cuartillo; 4 quartillos = 1 azumbre; 8 azumbres = 1 arroba mayor or cantara. This arroba = 4.26304 gallons, and is supposed to contain the weight of 35 libras of pure water. The arroba for oil, divided into 4 quartillos or 100 panillas, = only 3.31853 gallons.

Dry Measure.—4 ochavillos = 1 racion; 4 raciones = 1 quartillo; 2 quartillos = 1 medio; 2 medios = 1 almude; 12 almudes = 1 fanega; 12 fanegas = 1 cahiz. The fanega = 1.599 bushels.

Weight.—12 granos = 1 tomin; 3 tomines = 1 adarme; 2 adarmes = 1 ochava or draema; 8 ochavas = 1 onza; 8 onzas = 1 marco; 2 marcos = 1 libra. The libra = 1.016097 lbs. The apothecaries' libra = 0.7615 lb.

25 common libras = 1 arroba; 4 arrobas = 1 quintal; 20 quintals = 1 tonelada.

Money.—The peseta of 100 centimes = 1 French franc.

Formerly, 20 reals yellow, or $10\frac{1}{2}$ reals of plate, made 1 duro, piastre, or dollar. Also, 10 reals made 1 escudo; each real being divided into 10 decimes.

Sumatra.

Length.—2 jankal = 1 etto; 2 etto = 1 hailoh; 4 hailoh = 1 tung. The tung = 4 yards, or 12 feet.

Capacity.—The koolah = 0.1173 bushel. The pakha = 0.14535 gallon.

Weight.—The catty = 2.118 lbs.; the maund, 77 lbs.; the pecul, 133½ lbs.; the candil, 423½ lbs. For camphor, the ootan = 4 lbs.

Surinam. *See GUIANA.*Sweden. *See also NORWAY.*

The systems here are decimal, but based upon former units.

Length.—10 linien make 1 tum.

10 tum " 1 fot, = 11.679 inches, or 0.2966 metre.

10 fot " 1 stang.

10 stang " 1 ref.

Surface.—The square ref, of 10,000 square fot, = 0.2175 acre, or 8.8007 ares.

Capacity.—In both wet and dry measure cubes of the measures of length are used; as, the cubic tum, cubic fot, etc. In both wet and dry measures the canna is $\frac{1}{16}$ of a cubic fot, and equals

SWITZERLAND.

2.617188 litres. In dry measure this = 0.7428 bushel. In liquid measure it = 0.6914 gallon.

Weights.—100 korns make 1 ort.

100 orta " 1 skalpund, = 0.93379 lb., or
423.57 grammes.

100 skalpunds make 1 centner.

100 centners " 1 last.

Money.—100 ore make 1 riksdaler-ryksmint, or crown. The former riksdaler silfver was 48 skillings of 12 ore each. The crown now rates in United States custom-houses at \$0.268. The riksdaler, prior to 1873, rated at \$1.06.

Switzerland.

Prior to 1856, almost every canton in Switzerland had its own system of weights and measures. The present uniform system is upon a semi-metric basis.

Length.—10 traits make 1 ligne.

10 lignes " 1 pouce.

10 pouces " 1 pied, = 11.8112 inches, or 30 centimetres.

2 pieds " 1 brache.

2 braches " 1 aune.

3 aunes " 1 toise.

The perche = 10 pieds.

Road Measure.—The lieue of 16,000 pieds = 2.983 miles, or 4.8 kilometres.

Surface.—The arpent, 400 pieds square, = 3.558 acres, or 1.44 hectares.

Liquid Measure.—

25 pots make 1 setier.

4 setiers " 1 muid.

The pot is subdivided into $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{4}$. It represents $\frac{1}{8}$ cubic pied, or the bulk of 3 livres weight of pure water at the temperature of 4° Centigrade. The pot = 1.585 quarts, or 1.5 litres.

Dry Measure.—10 emines make 1 quateron (usually divided into $\frac{1}{2}$ and $\frac{1}{10}$). 10 quaterons make 1 sac.

There is a double quateron also. The quateron, $\frac{5}{8}$ of a cubic pied, is the volume of 30 livres of pure water at 4° Centigrade. It is equal to 0.4257 bushel, or 15 litres.

Weight.—The livre or pfund of the Zollverein is used, equal to 1.1023 lbs., or 500 grammes. 100 livres make 1 quintal. 2 loth = 1 once; 16 onces = 1 livre.

The livre of pharmacy = 375 grammes, and is divided into 12 onces, and these again are subdivided into drachmes, scruples, and grains, as in England.

Money.—100 rappen make 1 franc. This franc is the exact equivalent of the French franc. *See FRANCE.*

By United States mint assay, the silver 2-franc piece of Switzerland weighs 153.6 grains, is 835 fine, and worth \$0.356.

Syria. *See TURKEY.*

Tahiti. *See SOCIETY ISLANDS.*

Tasmania. Like AUSTRALIA.

Tobago. *See WEST INDIES.*

Tonquin. *See ANNAM.*

Tortola. *See WEST INDIES.*

Trinidad. *See WEST INDIES.*

Tripoli.

BARCA and FEZZAN have the same weights and measures.

Length.—The dra'a or pik of 8 palmi 26.42 inches. The arbi dra'a or lesser pik 19.029 inches.

Liquid Measure.—The mataro, for oil, 6.163 gallons.

Dry Measure.—

4 orbahs make 1 temen.

4 temen " 1 ueba or hueba, 3.0452 bushels.

Also, 20 tiberi 1 cafiso, 1.152 bushels.

Weight.—16 kharoubas make 1 drachma.

10 drachmas " 1 uckia.

16 uckias " 1 rotl.

100 rotls " 1 cantaro, 109.714 lbs.

Also, 40 oke " 1 cantaro or kantar.

The metical, for gold and silver, 73.6 grains.

Money.—100 para 1 gersh (plural, gurush). The gersh = \$0.1046. Under Mahmoud II. (1808) the gersh = \$0.1865. The mahbub of 20 piastres = \$0.8709 in United States custom-houses.

Tunis.

Length.—The dra'a hendaseh, for woolen goods, 26.49 inches. The pik, for linen, 18.62 inches; for silk 24.83 inches.

Liquid Measure.—The metter or mitre 2.6417 gallons.

Dry Measure.—The cafiz or caffiso 14.0753 bushels.

Weight.—16 uckia make 1 rotl or rottollo, 1.1175 lbs.

For meat, etc., the rotl sucky 1.2532 lbs., and the rotl ghredari for vegetables 1.4098 lbs. The cantaro 100 rotl.

For gold and silver, the metical 59.7 grains.

Money.—16 kharoubas make 1 piastre, \$0.1286. In United States customs it rates at \$0.125.

The gold 25-piastre piece, by United States mint assay, weighs 77.28 grains, is 900 fine, and worth \$2.9954. The silver 5-piastres (same authority) weighs 245.28 grains, is 898 $\frac{1}{2}$ fine, and worth \$0.612.

Turkestan.

Length.—The hasch = 28 inches, or 0.711 metre.

Weight.—8 seer make 1 batmann, = 276.41 lbs., or 125.88 kilogrammes.

Money.—44 pools make 1 tenga.

21 tengas “ 1 tilla, = \$2.7155.

Turkey.

In Turkey (both European and Asiatic) the weights and measures vary in the different provinces, and with the nature of the substances to be measured. The following system is that used in Constantinople:

Length.—Builders' and surveyors' scale—

12 nocktats make 1 hatt.

12 hatts “ 1 parmack.

24 parmacks “ 1 archine, = 29.528 inches, or 75 centimetres.

Scale for measuring cloths—

2 guirahs make 1 ouroub.

8 ouroubs “ 1 endaseh, = 25.7 inches, or 0.6523 metre.

At Smyrna the endaseh = 24.65 inches, and the pic = 26.29 inches. The pic = 26.63 inches at Aleppo, and 22.83 inches at Damascus.

Capacity.—4 chiniks make 1 kilo, = 1.00075 bushels, or 35.26 litres.

4 kilos “ 1 fortin.

For liquids, the almud = 1.381 gallons.

Weight.—4 karats make 1 deuke.

4 deukes “ 1 dirhem or drachm.

100 dirhem “ 1 chequi.

4 chequis “ 1 oke or occa, = 2.8337 lbs., or 1285.4 grammes.

44 okes make 1 kantar or cantaro.

In Asia Minor and Syria there is also the batman of 6 okes. Also the rottolo, which ranges from 1.2656 lbs. at Smyrna to 5.0642 lbs. at Aleppo.

Money.—40 paras make 1 piastre. The piastre is also divided into 100 aspers. Its value is \$0.04325. United States custom-house rate, \$0.0439.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.	Value.

Tuscany. (Florence and Leghorn.) See also ITALY.

Length.—12 denari = 1 soldo; 10 soldi = 1 palmo; 2 palmi = 1 braccio; 4 braccia = 1 canna. The palmo = 11.49 inches. The architect's canna = 5 braccia.

Road Measure.—The miglio of 2,833½ braccia = 1.0277 miles.

Surface.—The saccato of 16,500 square braccia = 1.389 acres.

Liquid Measure.—For wine, etc., 2 quartucci = 1 mezzetta; 2 mezzette = 1 boccale; 2 boccale = 1 fiasco; 20 fiasci = 1 barile. The barile = 12.0444 gallons, and should weigh 133½ libbre. The barile of spirits weighs 120 libbre. For oil, the barile is only 16 fiasci, and weighs 120 libbre. 2 barile of oil = 1 soma.

Dry Measure.—2 busoli = 1 quartuccio; 2 quartucci = 1 mezzetta; 2 mezzette = 1 metadella; 4 metadelle = 1 quarto; 2 quarti = 1 mina; 2 mine = 1 stajo; 3 staja = 1 sacco; 8 sacci = 1 moggio. The moggio = 16.5904 bushels.

Weight.—24 grani = 1 denaro; 3 denari = 1 dramma; 8 dramme = 1 oncia; 12 oncie = 1 libbra. The libbra = 0.7486 lb.

Money.—100 centesimi = 1 lira. Lira = \$0.1637. Formerly rated in United States custom-houses at \$0.16. The deni of 10 lire = \$1.6341. The francescone, of 10 paoli or 4 fiorini (before 1839), = \$1.0904. The fiorino or florin (before 1850) = \$0.2728. In Lucca, the silver 5-lire nuove Leucchesi of 1840 = \$0.7221.

United States of America.

In weights and measures, the United States differs but little from GREAT BRITAIN. By an act of Congress, passed in 1866, the metric system was legalized, but as yet it has not come into use. Some of the units in this country are slightly varied from the true units, however, as for instance the metre, which is really 39.37079 inches, is legalized at 39.37 inches. These variations will be given in their proper places below.

Length.—The ordinary system as in GREAT BRITAIN. In the metric system the *metre* is legal at 39.37 inches. The standard of length is a brass copy of the English standard yard, by Troughton of London, and is deposited in the office of weights and measures at Washington. The scale is 82 inches long, the standard yard being from the 27th to the 63d inch. At 62° Fahr. it exceeds the true British standard yard by 0.00087 inch.

Surface.—As in GREAT BRITAIN. The *hectare* is legal at 2.471 acres, and the *are* at 119.6 square yards.

Cubic Measure.—For wood, 16 cubic feet make 1 cord foot, and 8 cord feet make 1-cord.

Shipping Measure.—40 cubic feet make 1 United States shipping ton. 100 cubic feet make 1 register ton. The latter value is merely to facilitate computation. Wheat in bulk is a good standard of comparison, since the long ton of 2,240 pounds of this grain occupies just about 40 cubic feet. The register tonnage of a vessel represents her entire internal capacity. Her real carrying capacity for cargo is, however, 20 to 25 per cent. less than this; so that her actual measurement cargo in shipping tons is from 1½ to 2 times the number indicated in the register.

Liquid Measure.—The standard is the Winchester gallon of 231 cubic inches. In GREAT BRITAIN the imperial gallon is 277.274 cubic inches. Hence the imperial gallon = 1.2003 United

States gallons. The *litre* is legal at 1.0567 quarts. The following table is the usual one for wine measure:

4 gills	make 1 pint.	(pt.)
2 pints	" 1 quart.	(qt.)
4 quarts	" 1 gallon	(gal.)
42 gallons	" 1 tierce.	
63 "	" 1 hogshead.	(hhd.)
84 "	" 1 puncheon.	
126 "	" 1 pipe.	
252 "	" 1 tun.	
10 "	" 1 anker.	
18 "	" 1 runlet.	
31½ "	" 1 barrel.	(bbl.)

In some of the States 32 gallons make a barrel. Beer measure as in GREAT BRITAIN. Apothecaries' measure also as in GREAT BRITAIN, except that its gallon and subdivisions are of the Winchester scale.

Dry Measure.—The bushel is 2150.42 cubic inches, that of ENGLAND being 2218.192 cubic inches. Hence the imperial bushel = 1.0315 United States bushels. In dry measure the litre is legal at 0.908 quart. The following is the usual table:

2 pints	make 1 quart.	
4 quarts	" 1 gallon of 268.8 cubic inches.	
2 gallons	" 1 peck.	(pk.)
4 pecks	" 1 bushel.	(bush.)
36 bushels	" 1 chaldron.	(For coke and coal.)

Weight.—The three scales, avoirdupois, troy, and apothecaries', are the same as in GREAT BRITAIN. The standard avoirdupois pound of the United States, copied from the British standard, is 0.00734 grain too heavy. The gramme is legal at 15.432 grains, and the kilogramme at 2.2046 lbs. For postal purposes, *at present*, 15 grammes is reckoned the equivalent of the half-ounce. As for the ton, in some States it rates at 2,240 lbs., and in others at only 2,000. The latter value is the more usual and the more rational one.

Money.—	10 mills make 1 cent.
10 cents	" 1 dime.
10 dimes	" 1 dollar.
10 dollars	" 1 eagle.

In the West and South, $12\frac{1}{2}$ cents make a *bit*. In New York this sum is called a *shilling*. The *shilling* of the New England States is $16\frac{2}{3}$ cents. These values, however, are not legal.

The present nickel five-cent piece represents the metric system; being 2 centimetres in diameter, and weighing 5 grammes.

COIN TABLE.

COINS.	Material.	Weight.	Fineness.

Five-cent " Copper and nickel.....	Alloy.	77.180
Three-cent " " " "	"	30.000
Two-cent " Copper, tin, and zinc.....	Bronze.	96.000	v.....
Cent. Weight variable for different dates.....	Copper.
" Copper and nickel.....	Alloy.	72.000
" Copper, tin, and zinc.....	Bronze.	48.000
Half-cent. Obsolete. Weight variable.....	Copper.

The following tables give the standard weight and least current weight of gold coins, both singly and in sums.

1. In sums. Coins over \$1.00 in value:

Sum of \$100. Standard, 5.875 oz. Least current weight, 5.848 oz.

" \$500. " 26.875 " " " 26.741 "

" \$1,000. " 53.750 " " " 53.481 "

" \$5,000. " 268.750 " " " 267.407 "

Of the gold dollar, 5,000 pieces are current when weighing not less than 266.145 ounces troy.

2. Single coins:

Name of Coin.	Standard.	Least Current Weight.
Double-eagle,	516.0 grains,	513.42 grains.
Eagle,	258.0 "	256.71 "
Half-eagle,	129.0 "	128.36 "
Quarter-eagle,	64.5 "	64.18 "
Three dollars,	77.4 "	77.02 "
Dollar,	25.8 "	25.55 "

Uruguay.

Weights and measures of Spanish origin.

The fanega = 7.776 bushels, or 274 litres.

The libra = 1.014286 lbs.

In money, the patacon rates in United States custom-houses at \$0.9498.

Van Diemen's Land. See TASMANIA.

Venetian Lombardy. (VENICE and MILAN.) See also ITALY.

Length.—12 atomi = 1 punto; 12 punti = 1 oncia; 12 oncie = 1 braccio. Also, 2 piede = 1 braccio. The più = 15.61 inches at Milan, and 13.69 at Venice. The metre and its divisions are also used, under Italian names.

Road Measure.—The miglio = 1 kilometre, or 0.6214 mile.

Surface.—100 square palmi make 1 tornatura, = 1 are, or 0.0247 acre. Also, 1 campo = 0.6881 acre.

Capacity.—10 coppi = 1 pinta; 10 pintes = 1 mina; 10 mine = 1 soma. The pinta is the French litre, or 0.26418 gallon.

Weight.—10 grani = 1 denaro; 10 denari = 1 grosso; 10 grossi = 1 oncia; 10 oncie = 1 libbra metrica, or kilogramme. This libbra = 2.2046 lbs. 10 libbre = 1 rubbio.

For gold and silver, 24 grani = 1 denaro; 24 denari = 1 oncia; 8 oncie = 1 marco. The marco = 7.5562 troy ounces.

Money.—5 centesimi = 1 soldo Austriaca; 20 soldi = 1 lira. This lira = 20 Austrian kreuzers; hence, 8 lire = 1 Austrian florin.

In gold, the sovrano = \$6.778. The zecchino, or sequin, by French mint assay, is worth \$2.2704.

In silver, the scudo nuove = \$1.0109; the scudo Cisalpine = \$0.8971; and the croisat, or seudo della croce of the Venetian Republic, = \$1.2839. The Filippo of Milan (1786) = \$1.1408.

Venezuela.

Weights and measures of Spanish origin.

The vara = 32.874 inches, or 0.835 metre.

The arroba = 17.052 quarts, or 16.137 litres.

The quintal of 4 arrobas = 101.4381 lbs., or 46.012 kilogrammes.

The peso of 100 centajos = \$0.7836. In United States custom-houses it rates at \$0.7773.

Victoria. *See AUSTRALIA.*

Wallachia. *See ROUMANIA.*

West Australia. *See AUSTRALIA.*

West Indies.

1. SPANISH.—*Cuba, Porto Rico, Isle of Pines, and Culebra.*
2. FRENCH.—*Martinique, Deseada, Guadeloupe, Marie Galante, Les Saintes, and part of St. Martin.*
3. SWEDISH.—*St. Bartholomew.*
4. DUTCH.—Part of *St. Martin, Buen Ayre, Curaçoa, Oruba, and Tortuga.*
5. DANISH.—*Santa Cruz, St. Thomas, and St. Jan or John.*

6. BRITISH.—*Jamaica, Barbadoes, Grenada, Santa Lucia, St. Vincent, Trinidad, Tobago, Antigua, Barbuda, Dominica, Nevis, Montserrat, St. Kitt's, Tortola, the Bahamas, and various minor islands.*

7. INDEPENDENT.—*Hayti*, including the separate republic of *Santo Domingo*.

In the SPANISH WEST INDIES, SPANISH weights and measures are used, with slight variations. The vara = 33.375 inches. The fanega = 3.12367 bushels. The arroba = 4.1 gallons.

In money, the peso of Cuba and Porto Rico now rates in United States custom-houses at \$0.9258.

In the FRENCH possessions, the old weights and measures of France are used. In MARTINIQUE, the aune = 1.30148 yards; the barique = 50 gallons; the livre = 1.079176 lbs.; the carré = 8.1909 acres. LES SAINTES has the BRITISH system.

In ST. BARTHOLOMEW, SWEDISH values are used.

In the DANISH possessions the weights and measures are those of DENMARK; although ENGLISH standards of length are also used.

In the DUTCH WEST INDIES, except CURAÇOA, the weights and measures of HOLLAND are employed. CURAÇOA has a SPANISH system, in which the vara = 33.375 inches.

In the BRITISH possessions, the weights and measures are practically those of the UNITED STATES. In Jamaica, 102.023 gallons make a puncheon. The pound of Jamaica rates in United States custom-houses at \$4.865.

In HAYTI and SANTO DOMINGO are still the old French weights and measures, as in the FRENCH WEST INDIES. The dollar of HAYTI is the same in value as the dollar of the UNITED STATES.

Wurtemberg. See also GERMAN EMPIRE.

Length.—10 punkte = 1 linie; 10 linien = 1 zoll; 10 zoll = 1 fuss; 10 fuss = 1 ruthe. The klapfter is 6 fuss. The fuss = 11.26 inches, and the Stuttgart elle = 24.18 inches.

Surface.—The morgen of 38,400 square fuss = 0.7789 acre.

Liquid Measure.—4 schoppen = 1 mass; 10 mass = 1 immi; 16 immi = 1 eimer; 6 eimer = 1 fuder. The mass = 0.4853 gallon.

Dry Measure.—4 viertlein = 1 ecklein; 2 ecklein = 1 mässlein; 2 mässlein = 1 achtel; 2 achtel = 1 viertel; 4 viertel = 1 simri; 8 simri = 1 scheffel. The scheffel = 5.0292 bushels.

Weight.—As in the Zollverein, whose pfund is 500 grammes. For gold and silver, the mark = 233.855 grammes. The apothecaries' pfund (subdivided as in Germany generally) = 357.6337 grammes.

Money.—60 kreuzers = 1 florin; 5½ florins = 1 ducat.

Yucatan. See MEXICO.

Zanzibar.

Length.—The ohra = 22.48 inches, or 0.571 metre.

Capacity.—The djczla = 7.305 bushels, or 257.4 litres.

Weight.—The bazla = 34.226 lbs., or 15.525 kilogrammes. The mane = 3.0071 lbs. The franzella of 36 rotoli = 35.2822 lbs.

Money.—The Austrian " Maria Theresa thaler" is here known as the " Janurio dollar."

PART SECOND.

I.—MEASURES OF LENGTH.

In the following table the units of length of various nations are arranged alphabetically; the value of each one being given in English or American feet or inches, and in French metres. The metre is now a legal standard in the Argentine Confederation, Belgium, Brazil, Chili, Colombia, Ecuador, Egypt, France, Germany, Greece, Italy, Mexico, Netherlands, Spain, and the United States. After January 1, 1875, it will also be the standard in Austria.

Any value in feet may be converted into Russian sachines by simply dividing by seven.

VI.—LIQUID MEASURES.

IN this table the value of every measure is given in United States or Winchester quarts or gallons, in English imperial quarts or gallons, and in litres. The litre is a legal standard in the Argentine Confederation, Belgium, Brazil, Chili, Colombia, Ecuador, Egypt, France, Germany, Greece, Italy, Mexico, Netherlands, Spain, and the United States. After January 1, 1876, it will be the standard in Austria.

V I I I.—W E I G H T S.

In this table the value of every weight is given in English or American avoirdupois, and in metric grammes. Each value in grammes may be converted into pfunds of the German Zollverein by dividing by 500. The gramme and its derivatives are legal standards in the Argentine Confederation, Belgium, Brazil, Chili, Colombia, Ecuador, Egypt, France, Germany, Greece, Italy, Mexico, the Netherlands, Spain, and the United States. After January 1, 1876, the metric system will be the legal system in Austria.

IX.—MONEY.

In the following table only the more important monetary standards are given, the minor subdivisions being, with few exceptions, omitted. For each unit four values are given: First, its value in American currency (of the United States); which, expressed in dollars, represents also its value in dollars of Canada and Liberia, pesos of Paraguay, and pesos fuerte of the Argentine Confederation. Second, its value in French francs, to which are equivalent the francs of Belgium and Switzerland, pesetas of Spain, lire of Italy, drachmes of Greece, and piastres or lei of Roumania. By dividing any value in francs by five, the corresponding value may be obtained in pesos of Bolivia, Central America, Chili, Colombia, and Ecuador, and in sols of Peru. Third, its value in English sterling. Fourth, its value in German marks:

INTERNATIONAL SCIENTIFIC SERIES.

NOW READY.

- No. 1. **FORMS OF WATER**, in Clouds, Rain, Rivers, Ice, and Glaciers. By Prof. JOHN TYNDALL, LL. D., F. R. S. 1 vol. Cloth. Price, \$1.50.
- No. 2. **PHYSICS AND POLITICS**; or, Thoughts on the Application of the Principles of "Natural Selection" and "Inheritance" to Political Society. By WALTER BAGSHOT, Esq., author of "The English Constitution." 1 vol. Cloth. Price, \$1.50.
- No. 3. **FOODS**. By EDWARD SMITH, M. D., LL. B., F. R. S. 1 vol. Cloth. \$1.75.
- No. 4. **MIND AND BODY**. The Theories of their Relations. By ALEX. BAIN, LL. D., Professor of Logic in the University of Aberdeen. 1 vol., 12mo. Cloth. Price, \$1.50.
- No. 5. **THE STUDY OF SOCIOLOGY**. By HERBERT SPENCER. \$1.50.
- No. 6. **THE NEW CHEMISTRY**. By Prof. JOSIAH P. COOKE, Jr., of Harvard University. 1 vol., 12mo. Cloth. Price, \$2.00.
- No. 7. **THE CONSERVATION OF ENERGY**. By Prof. BALFOUR STEWART, LL. D., F. R. S. 1 vol., 12mo. Cloth. Price, \$1.50.
- No. 8. **ANIMAL LOCOMOTION**; or, Walking, Swimming, and Flying, with a Dissertation on Aeronautics. By J. BELL PETTIGREW, M. D., F. R. S., F. R. S. E., F. R. C. P. E. 1 vol., 12mo. Fully illustrated. \$1.75.
- No. 9. **RESPONSIBILITY IN MENTAL DISEASE**. By HENRY MAUDSLEY, M. D. 1 vol., 12mo. Cloth. Price, \$1.50.
- No. 10. **THE SCIENCE OF LAW**. By Prof. SHELDON AMOS. 1 vol., 12mo. Cloth. Price, \$1.75.
- No. 11. **ANIMAL MECHANISM**. A Treatise on Terrestrial and Aërial Locomotion. By E. J. MAREY. With 117 Illustrations. Price, \$1.75.
- No. 12. **THE HISTORY OF THE CONFLICT BETWEEN RELIGION AND SCIENCE**. By JOHN WM. DRAPER, M. D., LL. D., author of "The Intellectual Development of Europe." Price, \$1.75.
- No. 13. **THE DOCTRINE OF DESCENT, AND DARWINISM**. By Prof. OSCAR SCHMIDT, Strasburg University. Price, \$1.50.
- No. 14. **THE CHEMISTRY OF LIGHT AND PHOTOGRAPHY**. In its Application to Art, Science, and Industry. By Dr. HERMANN VOLGEL. 100 Illustrations. Price, \$2.00.
- No. 15. **FUNGI**; their Nature, Influence, and Uses. By M. C. COOKE, M. A., LL. D. Edited by Rev. M. J. BERKELEY, M. A., F. L. S. With 109 Illustrations. Price, \$1.50.
- No. 16. **THE LIFE AND GROWTH OF LANGUAGE**. By Prof. W. D. WHITNEY, of Yale College. Price, \$1.50.
- No. 17. **MONEY AND THE MECHANISM OF EXCHANGE**. By W. STANLEY JEVONS, M. A., F. R. S., Professor of Logic and Political Economy in the Owens College, Manchester. Price, \$1.75.
- No. 18. **THE NATURE OF LIGHT**, with a General Account of Physical Optics. By Dr. EUGENE LOMMEL, Professor of Physics in the University of Erlangen. With 188 Illustrations and a Plate of Spectra in Chromolithography. Price, \$2.00.
- No. 19. **ANIMAL PARASITES AND MESSMATES**. By Monsieur VAN BENEDEN, Professor of the University of Louvain, Correspondent of the Institute of France. With 83 Illustrations. Price, \$1.50.
- No. 20. **ON FERMENTATIONS**. By P. SCHÜTZENBERGER, Director at the Chemical Laboratory at the Sorbonne. With 28 Illustrations. Price, \$1.50.
- No. 21. **THE FIVE SENSES OF MAN**. By JULIUS BERNSTEIN, O. O. Professor of Physiology in the University of Halle. With 91 Illustrations. Price, \$1.75.
- No. 22. **THE THEORY OF SOUND IN ITS RELATION TO MUSIC**. By Prof. PIETRO BLASERNA, of the Royal University of Rome. With numerous Woodcuts. 1 vol., 12mo. Cloth. Price, \$1.50.

D. APPLETON & CO., PUBLISHERS, 549 & 551 Broadway, N. Y.

THE INTERNATIONAL SCIENTIFIC SERIES.

D. APPLETON & Co. have the pleasure of announcing that they have made arrangements for publishing, and have recently commenced the issue of, a **SERIES OF POPULAR MONOGRAPHS**, or small works, under the above title, which will embody the results of recent inquiry in the most interesting departments of advancing science.

The character and scope of this series will be best indicated by a reference to the names and subjects included in the subjoined list, from which it will be seen that the co-operation of the most distinguished professors in England, Germany, France, and the United States, has been secured, and negotiations are pending for contributions from other eminent scientific writers.

The works will be issued in New York, London, Paris, Leipsic, Milan, and St. Petersburg.

The **INTERNATIONAL SCIENTIFIC SERIES** is entirely an American project, and was originated and organized by Dr. E. L. Youmans, who has spent much time in Europe, arranging with authors and publishers.

FORTHCOMING VOLUMES.

Prof. W. KINGDON CLIFFORD, M. A. *The First Principles of the Exact Sciences explained to the Non-mathematical.*

Prof. T. H. HUXLEY, LL. D., F. R. S. *Bodily Motion and Consciousness.*

Dr. W. B. CARPENTER, LL. D., F. R. S. *The Physical Geography of the Sea.*

Prof. WILLIAM ODLING, F. R. S. *The Old Chemistry viewed from the New Stand-point.*

W. LAUDER LINDSAY, M. D., F. R. S. E. *Mind in the Lower Animals.*

Sir JOHN LUBBOCK, Bart., F. R. S. *On Ants and Bees.*

Prof. W. T. THISELTON DYER, B. A., B. Sc. *Form and Habit in Flowering Plants.*

Mr. J. N. LOCKYER, F. R. S. *Spectrum Analysis.*

Prof. MICHAEL FOSTER, M. D. *Protoplasm and the Cell Theory.*

H. CHARLTON BASTIAN, M. D., F. R. S. *The Brain as an Organ of Mind.*

Prof. A. C. RAMSAV, LL. D., F. R. S. *Earth Sculpture: Hills, Valleys, Mountains, Plains, Rivers, Lakes; How they were Produced, and how they have been Destroyed.*

Prof. RUDOLPH VIRCHOW (Berlin University). *Morbid Physiological Action.*

Prof. CLAUDE BERNARD. *History of the Theories of Life.*

D. APPLETON & CO., PUBLISHERS, 549 & 551 Broadway, N. Y.

THE INTERNATIONAL SCIENTIFIC SERIES.

FORTHCOMING VOLUMES.

- Prof. H. SAINTE-CLAIRE DEVILLE. *An Introduction to General Chemistry.*
- Prof. WURTZ. *Atoms and the Atomic Theory.*
- Prof. De QUATREFAGES. *The Human Race.*
- Prof. LACAZE-DUTHIERS. *Zoölogy since Cuvier.*
- Prof. BERTHELOT. *Chemical Synthesis.*
- Prof. C. A. YOUNG, Ph. D. (of Dartmouth College). *The Sun.*
- Prof. OGDEN N. ROOD (Columbia College, N. Y.). *Modern Chromatics and its Relations to Art and Industry.*
- Prof. J. ROSENTHAL. *General Physiology of Muscles and Nerves.*
- Prof. JAMES D. DANA, M. A., LL. D. *On Cephalization; or, Head-characters in the Gradation and Progress of Life.*
- Prof. S. W. JOHNSON, M. A. *On the Nutrition of Plants.*
- Prof. AUSTIN FLINT, Jr., M. D. *The Nervous System, and its Relation to the Bodily Functions.*
- Prof. FERDINAND COHN (Breslau University). *Thallophytes (Algæ, Lichens, Fungi).*
- Prof. HERMANN (University of Zurich). *Respiration.*
- Prof. LEUCKART (University of Leipsic). *Outlines of Animal Organization.*
- Prof. LIEBREICH (University of Berlin). *Outlines of Toxicology.*
- Prof. KUNDT (University of Strasburg). *On Sound.*
- Prof. REES (University of Erlangen). *On Parasitic Plants.*
- Prof. STEINTHAL (University of Berlin). *Outlines of the Science of Language.*
- P. BERT (Professor of Physiology, Paris). *Forms of Life and other Cosmical Conditions.*
- E. ALGLAVE (Professor of Constitutional and Administrative Law at Douai, and of Political Economy at Lille). *The Primitive Elements of Political Constitutions.*
- P. LORAIN (Professor of Medicine, Paris). *Modern Epidemics.*
- Mons. FREIDEL. *The Functions of Organic Chemistry.*
- Mons. DEBRAY. *Precious Metals.*
- Prof. CORFIELD, M. A., M. D. (Oxon.). *Air in its Relation to Health.*
- Prof. A. GIARD. *General Embryology.*

D. APPLETON & CO., PUBLISIERS, 549 & 551 Broadway, N. Y.

RECENT PUBLICATIONS.

Diseases of Modern Life. By Dr. B. W. RICHARDSON, F. R. S. 1 vol., 12mo. Cloth. \$2.00.

"*'Diseases of Modern Life'* is a work which throws so much light on what it is of the utmost importance for the public to know, that it deserves to be thoroughly and generally read."—*Graphic*.

"The literature on preventive medicine has received no more valuable contribution than this admirably-written treatise by one of the most accomplished physicians of Great Britain, who has concentrated upon his task a great amount of scientific research and clinical experience. No book that we have ever read more fully merits the attention of the intelligent public, to whom it is addressed."—*The World*.

Comin' Thro' the Rye. 1 vol., 8vo. Paper covers. 75 cents.

"A very amusing and well-written story. The history of the youth of the Adams is extremely amusing, and told in a bright and witty manner. . . . One of the pleasantest novels of the season."—*Morning Post*.

"It is a clever novel, never dull, and the story never hangs fire."—*Standard*.

Memoir and Correspondence of Caroline Herschel. By Mrs. JOHN HERSCHEL. With Portraits. 12mo. Cloth. \$1.75.

"The unlimited admiration excited by the noble, heroic virtues, and the uncommon talents of the subject of the memoir, is overborne by the intense sympathy felt for her long life of unselfish and unregretted devotion to others."—*Chicago Tribune*.

General History of Greece, from the Earliest Period to the Death of Alexander the Great. By the Rev. GEORGE W. COX. 1 vol., 12mo. Cloth. \$2.50.

"We envy those schoolboys and undergraduates who will make their first acquaintance with Greek history through Mr. Cox's admirable volume. It ought to supersede all the popular Histories of Greece which have gone before it."—*The Hour*.

"The book is worthy, in every way, of the author's reputation. . . . It is altogether a most interesting and valuable book."—*Educational Times*.

A Short History of Natural Science and of the Progress of Discovery from the Time of the Greeks to the Present Day. By ARABELLA B. BUCKLEY. With Illustrations. 1 vol., 12mo. \$2.00.

"Miss Buckley, the friend of Sir Charles Lyell, and for many years the secretary of the great geologist, in this volume has given a continuous, methodical, and complete sketch of the main discoveries of science from the time of Thales, one of the seven wise men, B. C. 700, down to the present day. The work is unique in its way, being the first attempt ever made to produce a brief and simple history of science. The author has entirely succeeded in her labors, evincing judgment, learning, and literary skill."—*Episcopal Register*.

A Hand-Book of Architectural Styles. Translated from the German by W. COTLETT-SANDERS. 1 vol., 8vo. With 639 Illustrations. \$6.00.

"There is a great amount of information in the book, in a small compass. For one who simply wishes to gain a full knowledge of the various styles of architecture, written in a clear and interesting manner, the volume has not its equal nor rival in the English language. This knowledge will be facilitated by the profuse illustrations, of which there are not less than six hundred and thirty-nine, nearly all handsome specimens of engraving, among which figure a large number of famous buildings, ancient and modern."—*Evening Mail*.

D. APPLETON & CO., 549 & 551 Broadway, N. Y.

DISEASES OF MODERN LIFE.

By B. W. RICHARDSON, M.D.

1 vol., 12mo, Cloth, 520 pages, - - - - \$2.00.

From the Tribune.

"He has no affinity with the class of old-women doctors who are eternally fussing and dosing, and with their infallible prescriptions break down more constitutions than all the skill of the faculty can repair. His principal aim is to point out the causes which lead to disease, and to prevent its occurrence by observing the physical laws which are the conditions of health."

From Nature.

"The work is of great value as a practical guide to enable the reader to detect and avoid various sources of disease, and it contains, in addition, several introductory chapters on natural life and natural death, the phenomena of disease, disease antecedent to birth, and on the effects of the seasons, of atmospheric temperature, of atmospheric pressure, of moisture, winds, and atmospheric chemical changes, which are of great general interest."

From the Charleston Courier.

"In this valuable and deeply-interesting work Dr. Richardson treats the nervous system as the very principle of life; and he shows how men do it violence, yet expect immunity where the natural sentence is death."

From the Toledo Chronicle.

"His aim in the book under consideration is to teach the living generations to so conduct themselves, and avoid and prevent disease, that death will not come prematurely, as is almost generally the case at the present time. His work contains many useful and valuable hints, suggestions, and directions, and they are put in such good and readable shape that one does not tire in studying them."

From the Boston Commonwealth.

"Particular attention is given to diseases from worry and mental strain, from the passions, from alcohol, tobacco, narcotics, foods, impure air, late hours, and broken sleep, idleness, intermarriage, etc., thus touching upon causes which do not enter into the consideration of sickness."

D. APPLETON & CO., Publishers,
549 & 551 BROADWAY, NEW YORK.

J U S T P U B L I S H E D .

Money and the Mechanism of Exchange.

VOL. XVII. of the INTERNATIONAL SCIENTIFIC SERIES. By W. STANLEY JEVONS, M. A.,
F. R. S., Professor of Logic and Political Economy in the Owens College, Man-
chester. 1 vol., 12mo. Cloth. Price, \$1.75.

"He offers us what a clear-sighted, cool-headed, scientific student has to say on the nature, properties, and natural laws of money, without regard to local interests or national bias. His work is popularly written, and every page is replete with solid instruction of a kind that is just now lamentably needed by multitudes of our people who are victimized by the grossest fallacies."—*Popular Science Monthly*.

"If Professor Jevons's book is read as extensively as it deserves to be, we shall have sounder views on the use and abuse of money, and more correct ideas on what a circulating medium really means."—*Boston Saturday Evening Gazette*.

"Prof. Jevons writes in a sprightly but colorless style, without trace of either prejudice or mannerism, and shows no commitment to any theory. The time is not very far distant, we hope, when legislators will cease attempting to legislate upon money before they know what money is, and, as a possible help toward such a change, Prof. Jevons deserves the credit of having made a useful contribution to a department of study long too much neglected, but of late years, we are gratified to say, becoming less so."—*The Financier, New York*.

Weights, Measures, and Money, of all Nations.

Compiled by F. W. CLARKE, S. B., Professor of Physics and Chemistry in the Uni-
versity of Cincinnati. Price, \$1.50.

"This work will be found very useful to the merchant, economist, and banker, as the arrangement is highly convenient for reference, and in a form and classification never before presented to the public. It also contains a series of tables, arranged alphabetically, showing the value of each unit as given both in the English and the metric standards. The metric system is used coextensively with the ordinary system, and is a characteristic feature of the book.

"The contents, among other things, contain the following useful and comprehensive tables, viz.: I. Measures of Length, in both the English or American feet or inches, and in French metres. II. Road-Measures in English miles and French kilo-metres. III. Land-Measures. IV. Cubic Measures. V. Liquid Measures. VI. Dry Measures. VII. Weights, and finally Money. This latter table is one of the most useful and valuable tables probably to be found, giving as it does the standards in dollars, francs, sterling, and marks, and alone is worth the cost of the book."—*N. Y. Commercial and Financial Chronicle*.

"We commend this carefully-prepared and convenient volume to all persons who wish to acquire information on the subject of which it treats."—*Boston Globe*.

"The work necessary to the production of this little volume has been judiciously planned and skilfully executed."—*Chicago Tribune*.

D. APPLETON & CO., PUBLISHERS, 549 & 551 Broadway, N. Y.

Works of Charles Darwin.

JOURNAL OF RESEARCHES into the Natural History and Geology of the Countries visited during the Voyage of H. M. S. *Beagle* round the World, under the command of Captain Fitzroy, R. N. 1 vol., 12mo. 579 pages. Cloth. Price, \$2.00.

"Darwin was nearly five years on board the *Beagle*. A keen observer, and a genuine philosopher, he has brought back to us a precious freight of facts and truths. The work has been for some time before the public, and has won a high place among readers of every class. It is not so scientific as to be above the comprehension of intelligent readers who are not scientific. Some facts and species, new even to the scientific, are brought to light. Darwin's transparent, eloquent style richly illuminates his observations. The weightier matters to which he alludes are interspersed among more familiar observations, such as would naturally be made by a traveler passing through new and wonderful scenes. It is an instructive and interesting book."—*Northwestern Christian Advocate*.

THE ORIGIN OF SPECIES by Means of Natural Selection, or the Preservation of Favored Races in the Struggle for Life. New and revised edition, with Additions. With copious Index. 1 vol., 12mo. Cloth. Price, \$2.00.

"Personally and practically exercised in zoölogy, in minute anatomy, in geology, a student of geographical distribution, not in maps and in museums, but by long voyages and laborious collection; having largely advanced each of these branches of science, and having spent many years in gathering and sifting materials for his present work, the store of accurately-registered facts upon which the author of the 'Origin of Species' is able to draw at will, is prodigious."—*Prof. T. H. Huxley*.

THE DESCENT OF MAN, and Selection in Relation to Sex. With Illustrations. New edition, revised and augmented. Complete in one volume. 688 pages. Price, \$3.00.

"This theory is now indorsed by many eminent scientists, who at first combated it, including Sir Charles Lyell, probably the most learned of geologists, and even by a class of Christian divines like Dr. McCosh, who think that certain theories of cosmogony, like the nebular hypothesis and the law of evolution, may be accepted without doing violence to faith."—*Evening Bulletin*.

THE EXPRESSION OF THE EMOTIONS IN MAN AND the Lower Animals. With Photographic and other Illustrations. 1 vol., thick 12mo. Cloth. Price, \$3.50.

"Whatever one thinks of Mr. Darwin's theory, it must be admitted that his great powers of observation are as conspicuous as ever in this inquiry. During a space of more than thirty years, he has, with exemplary patience, been accumulating information from all available sources. The result of all this is undoubtedly the collection of a mass of minute and trustworthy information which must possess the highest value, whatever may be the conclusions ultimately deduced from it."—*London Times*.

INSECTIVOROUS PLANTS. With Illustrations. 1 vol., 12mo. Cloth. Price, \$2.00.

"In conclusion, we lay this book down with increased admiration for Mr. Darwin as a discoverer and expositor of facts, and with great satisfaction at the increase to our knowledge of plant physiology given us, as well as the ample promise of further additions as the direct consequence of the present publication."—*London Athenaeum*.

"In this work Mr. Darwin's patient and painstaking methods of investigation appear to the best possible advantage. It is impossible to read it without enthusiastic admiration for the ingenuity which he displays in devising tests to determine the characteristics of the plants, the peculiarities of which he is studying, and, as is always the case with him, he presents the conclusions arrived at in language so lucid that he who reads simply for information is sure to be attracted and charmed quite as much as the professional student."—*N. Y. Times*.

D. APPLETON & CO., PUBLISHERS, 549 & 551 Broadway, N. Y.

RECENT PUBLICATIONS.—SCIENTIFIC.

THE PRINCIPLES OF MENTAL PHYSIOLOGY. With their Applications to the Training and Discipline of the Mind, and the Study of its Morbid Conditions. By W. B. CARPENTER, F. R. S., etc. Illustrated. 12mo. 737 pages. Price, \$3.00.

"The work is probably the ablest exposition of the subject which has been given to the world, and goes far to establish a new system of Mental Philosophy, upon a much broader and more substantial basis than it has heretofore stood."—*St. Louis Democrat.*

"Let us add that nothing we have said, or in any limited space could say, would give an adequate conception of the valuable and curious collection of facts bearing on morbid mental conditions, the learned physiological exposition, and the treasure-house of useful hints for mental training, which make this large and yet very amusing, as well as instructive book, an encyclopaedia of well-classified and often very startling psychological experiences."—*London Spectator.*

THE EXPANSE OF HEAVEN. A Series of Essays on the Wonders of the Firmament. By R. A. PROCTOR, B. A.

"A very charming work; cannot fail to lift the reader's mind up through Nature's work to Nature's God."—*London Standard.*

"Prof. R. A. Proctor is one of the very few rhetorical scientists who have the art of making science popular without making it or themselves contemptible. It will be hard to find anywhere else so much skill in effective expression, combined with so much genuine astronomical learning, as is to be seen in his new volume."—*Christian Union.*

PHYSIOLOGY FOR PRACTICAL USE. By various Writers. Edited by JAMES HINTON. With 50 Illustrations. 1 vol., 12mo. Price, \$2.25.

"This book is one of rare value, and will prove useful to a large class in the community. Its chief recommendation is in its applying the laws of the science of physiology to cases of the deranged or diseased operations of the organs or processes of the human system. It is as thoroughly practical as is a book of formulas of medicine, and the style in which the information is given is so entirely devoid of the mystification of technical or scientific terms that the most simple can easily comprehend it."—*Boston Gazette.*

"Of all the works upon health of a popular character which we have met with for some time, and we are glad to think that this most important branch of knowledge is becoming more enlarged every day, the work before us appears to be the simplest, the soundest, and the best."—*Chicago Inter-Ocean.*

THE GREAT ICE AGE, and its Relations to the Antiquity of Man. By JAMES GEIKIE, F. R. S. E. With Maps, Charts, and numerous Illustrations. 1 vol., thick 12mo. Price, \$2.50.

"'The Great Ice Age' is a work of extraordinary interest and value. The subject is peculiarly attractive in the immensity of its scope, and exercises a fascination over the imagination so absorbing that it can scarcely find expression in words. It has all the charms of wonder-tales, and excites scientific and unscientific minds alike."—*Boston Gazette.*

"Every step in the process is traced with admirable perspicuity and fullness by Mr. Geikie."—*London Saturday Review.*

"'The Great Ice Age,' by James Geikie, is a book that unites the popular and abstruse elements of scientific research to a remarkable degree. The author recounts a story that is more romantic than nine novels out of ten, and we have read the book from first to last with unflagging interest."—*Boston Commercial Bulletin.*

ADDRESS DELIVERED BEFORE THE BRITISH ASSOCIATION, assembled at Belfast. By JOHN TYNDALL, F. R. S., President. Revised, with additions, by the author, since the delivery. 12mo. 120 pages. Paper. Price, 50 cents.

This edition of this now famous address is the only one authorized by the author, and contains additions and corrections not in the newspaper reports.

THE PHYSIOLOGY OF MAN. Designed to represent the Existing State of Physiological Science as applied to the Functions of the Human Body. By AUSTIN FLINT, Jr., M. D. Complete in Five Volumes, octavo, of about 500 pages each, with 105 Illustrations. Cloth, \$22.00; sheep, \$27.00. Each volume sold separately. Price, cloth, \$4.50; sheep, \$5.50. The fifth and last volume has just been issued.

The above is by far the most complete work on human physiology in the English language. It treats of the functions of the human body from a practical point of view, and is enriched by many original experiments and observations by the author. Considerable space is given to physiological anatomy, particularly the structure of glandular organs, the digestive system, nervous system, blood-vessels, organs of special sense, and organs of generation. It not only considers the various functions of the body, from an experimental stand-point, but is peculiarly rich in citations of the literature of physiology. It is therefore invaluable as a work of reference for those who wish to study the subject of physiology exhaustively. As a complete treatise on a subject of such interest, it should be in the libraries of literary and scientific men, as well as in the hands of practitioners and students of medicine. Illustrations are introduced wherever they are necessary for the elucidation of the text.

D. APPLETON & CO., PUBLISHERS, 549 & 551 Broadway, N. Y.

THE GREAT ICE AGE, AND ITS RELATIONS TO THE ANTIQUITY OF MAN.

By JAMES GEIKIE, F. R. S. E.

With Maps, Charts, and numerous Illustrations.

1 vol., thick 12mo. . . . Price, \$2.50.

OPINIONS OF THE PRESS.

"Intelligent general readers, as well as students of geology, will find more information and reasonable speculation concerning the great glacial epoch of our globe in this volume than can be gathered from a score of other sources. The author writes not only for the benefit of his 'fellow-hammerers,' but also for non-specialists, and any one gifted with curiosity in respect to the natural history of the earth will be delighted with the clear statements and ample illustrations of Mr. Geikie's 'Great Ice Age.'"*—Episcopal Register.*

"'The Great Ice Age' is a work of extraordinary interest and value. The subject is peculiarly attractive in the immensity of its scope, and exercises a fascination over the imagination so absorbing that it can scarcely find expression in words. It has all the charms of wonder-tales, and excites scientific and unscientific minds alike."*—Boston Gazette.*

"Mr. Geikie has succeeded in writing one of the most charming volumes in the library of popularized science."*—Utica Herald.*

"We cannot too heartily commend the style of this book, which is scientific and yet popular, and yet not so popular as to dispense with the necessity of the reader's putting his mind to work in order to follow out the author in his forcible yet lucid arguments. Nor can the attentive reader fail to leave the work with the same enthusiasm over the subject as is shown in every page by the talented author."*—Portland Press.*

"Although Mr. Geikie's position in the scientific world is such as to indicate that he is a pretty safe teacher, some of his views are decidedly original, and he does not make a point of sticking to the beaten path."*—Springfield Union.*

"Prof. Geikie's book is one that may well engage thoughtful students other than geologists, bearing as it does on the absorbing question of the unwritten history of our race. The closing chapter of his work, in which, reviewing his analytical method, he constructs the story of the checkered past of the last 200,000 years, can scarcely fail to give food for thought even to the indifferent."*—Buffalo Courier.*

"Every step in the process is traced with admirable perspicuity and fullness by Mr. Geikie."*—London Saturday Review.*

"It offers to the student of geology by far the completest account of the period yet published, and is characterized throughout by refreshing vigor of diction and originality of thought."*—Glasgow Herald.*

PRINCIPLES
OF
MENTAL PHYSIOLOGY,
WITH

*Their Applications to the Training and Discipline of the Mind, and
the Study of its Morbid Conditions.*

By WILLIAM CARPENTER, M. D., LL. D.

1 vol., 12mo. 737 pages. Price, \$3.00.

"Dr. Carpenter has won his reputation as a physiologist, largely from the clearness of his expositions, and the present work shows that his capacity in this respect is still vigorous. Its most scientific parts are attractive reading, and the extensive array of personal instances and incidents, which illustrate his positions, gives great fascination to the volume.

"It is a hard book to lay down when once entered upon, and Dr. Carpenter may be congratulated upon having contributed so fresh a book upon such an important subject."—*Popular Science Monthly*.

"Is a profound and learned work, which goes to the very bottom of the problems of Life and Eternity."—*Boston Commonwealth*.

"The work is probably the ablest exposition of the subject which has been given to the world, and goes far to establish a new system of mental philosophy upon a much broader and more substantial basis than it has heretofore stood."—*St. Louis Democrat*.

"The work is a revision and expansion of the author's well-known work bearing the same name, published over twenty years ago, and so popular as to reach half a dozen editions."—*Cincinnati Gazette*.

THE EXPANSE OF HEAVEN;

A Series of Essays on the Wonders of the Firmament.

By R. A. PROCTOR, B. A.

1 vol., 12mo. Cloth. Price, \$2.00.

"It is Mr. Proctor's good fortune that not only is he one of the greatest of living astronomers, but that he has a power of imparting knowledge that is not equaled by any living astronomer. His style is as lucid as the light with which he deals so largely, and the plainest of readers can go along with him with entire ease, and comprehend all that he says on the grandest subject ever discussed by mortal intelligence. Most scientific writers either cannot or will not so use the pen as to make themselves understood by the many; not so with Mr. Proctor: he both can and does so write as to command the attention of the million, and this too without in the least derogating from the real dignity of his sublime theme. Few of us can study astronomy, because that implies a concentrated devotion to an inexhaustible matter, but we all can read astronomical works to our great advantage if astronomers who write will but write plainly; and in that way, without having the slightest claim to be spoken of as "scientists," we can acquire no ordinary amount of knowledge concerning things that are of the loftiest nature, and the effect of which must be to elevate the mind. Such a book as 'The Expanse of Heaven' cannot fail to be of immense use in forwarding the work of education even when it is read only for amusement, so forcible is the impression it makes on the mind from the importance of the subjects treated of, while the manner of treatment is so good."—*Boston Traveller*.

"Since the appearance of Ennis's book on 'The Origin of the Stars,' we have not read a more attractive work on astronomy than this. It is learned enough to be instructive, and light enough to be very entertaining."—*Alta California*.

"It reads like a work of fiction, so smooth and consecutive is it; but it inspires the worthiest thoughts and the highest aspirations."—*Boston Commonwealth*.

"Perfectly adapted to their purposes, namely, to awaken a love for science, and at the same time to convey, in a pleasant manner, some elementary facts."—*Church Herald*.

"This is not a technically scientific work, but an expression of a true scholar's conception of the vastness and grandeur of the heavens. There is no dry detail, but blended with the scholar's discoveries are the poet's thoughts, and a true recognition of the Almighty's power."—*Troy Times*.

*A thoughtful and valuable contribution to the best religious literature
of the day.*

RELIGION AND SCIENCE.

A Series of Sunday Lectures on the Relation of Natural and Revealed Religion, or the Truths revealed in Nature and Scripture.

By JOSEPH LE CONTE,
PROFESSOR OF GEOLOGY AND NATURAL HISTORY IN THE UNIVERSITY OF CALIFORNIA.

12mo, cloth. Price, \$1.50.

OPINIONS OF THE PRESS.

"This work is chiefly remarkable as a conscientious effort to reconcile the revelations of Science with those of Scripture, and will be very useful to teachers of the different Sunday-schools."—*Detroit Union*.

"It will be seen, by this *r  sum  * of the topics, that Prof. Le Conte grapples with some of the gravest questions which agitate the thinking world. He treats of them all with dignity and fairness, and in a manner so clear, persuasive, and eloquent, as to engage the undivided attention of the reader. We commend the book cordially to the regard of all who are interested in whatever pertains to the discussion of these grave questions, and especially to those who desire to examine closely the strong foundations on which the Christian faith is reared."—*Boston Journal*.

"A reverent student of Nature and religion is the best-qualified man to instruct others in their harmony. The author at first intended his work for a Bible-class, but, as it grew under his hands, it seemed well to give it form in a neat volume. The lectures are from a decidedly religious stand-point, and as such present a new method of treatment."—*Philadelphia Age*.

"This volume is made up of lectures delivered to his pupils, and is written with much clearness of thought and unusual clearness of expression, although the author's English is not always above reproach. It is partly a treatise on natural theology and partly a defense of the Bible against the assaults of modern science. In the latter aspect the author's method is an eminently wise one. He accepts whatever science has proved, and he also accepts the divine origin of the Bible. Where the two seem to conflict he prefers to await the reconciliation, which is inevitable if both are true, rather than to waste time and words in inventing ingenious and doubtful theories to force them into seeming accord. Both as a theologian and a man of science, Prof. Le Conte's opinions are entitled to respectful attention, and there are few who will not recognize his book as a thoughtful and valuable contribution to the best religious literature of the day."—*New York World*.

DESHANEL'S NATURAL PHILOSOPHY.

NATURAL PHILOSOPHY: AN ELEMENTARY TREATISE.

By PROFESSOR DESHANEL, of Paris.

Translated, with Extensive Additions,

BY J. D. EVERETT, D. C. L., F. R. S.,

PROFESSOR OF NATURAL PHILOSOPHY IN THE QUEEN'S COLLEGE, BELFAST.

1 vol., medium 8vo. Illustrated by 760 Wood Engravings and 3 Colored Plates.
Cloth, \$6.50. Published, also, separately, in Four Parts. Limp cloth, each \$1.75.

Part I. MECHANICS, HYDROSTATICS, and PNEUMATICS. Part II. HEAT.
Part III. ELECTRICITY and MAGNETISM. Part IV. SOUND and LIGHT.

Saturday Review.

"Systematically arranged, clearly written, and admirably illustrated, showing no less than than 760 engravings on wood and three colored plates, it forms a model work for a class of experimental physics. Far from losing in its English dress any of the qualities of matter or style which distinguished it in its original form, it may be said, to have gained in the able hands of Professor Everett, both by way of arrangement and of incorporation of fresh matter, without parting in the translation with any of the freshness or force of the author's text."

Athenæum.

"A good working class-book for students in experimental physics."

Westminster Review.

"An excellent handbook of physics, especially suitable for self-instruction. . . . The work is published in a magnificent style; the woodcuts especially are admirable."

Quarterly Journal of Science.

"We have no work in our own scientific literature to be compared with it, and we are glad that the translation has fallen into such good hands as those of Professor Everett. . . . It will form an admirable text-book."

Nature.

"The engravings with which the work is illustrated are especially good, a point in which most of our English scientific works are lamentably deficient. The clearness of Deschanel's explanations is admirably preserved in the translation, while the value of the treatise is considerably enhanced by some important additions. . . . We believe the book will be found to supply a real need."

D. APPLETON & CO., New York.

THE POPULAR SCIENCE MONTHLY.

CONDUCTED BY

E. L. YOUNMANS.

This periodical was started (in 1872) to promote the diffusion of valuable scientific knowledge, in a readable and attractive form, among all classes of the community, and has thus far met a want supplied by no other magazine in the United States.

Eight volumes have now appeared, which are filled with instructive and interesting articles and abstracts of articles, original, selected, translated, and illustrated, from the pens of the leading scientific men of different countries. Accounts of important scientific discoveries, the application of science to the practical arts, and the latest views put forth concerning natural phenomena, have been given by *savants* of the highest authority. Prominent attention has been also devoted to those various sciences which help to a better understanding of the nature of man, to the bearings of science upon the questions of society and government, to scientific education, and to the conflicts which spring from the progressive nature of scientific knowledge.

THE POPULAR SCIENCE MONTHLY has long since ceased to be an experiment. It has passed into a circulation far beyond the most sanguine hopes at first entertained, and the cordial and intelligent approval which it has everywhere met, shows that its close and instructive discussions have been well appreciated by the reading portion of the American people. It has not been its policy to make boastful promises of great things to be done in the future, but rather to appeal to what it has already accomplished as giving it a claim upon popular patronage. But no pains will be spared to improve it and make it still more worthy of liberal support, and still more a necessity to the cultivated classes of the country.

THE POPULAR SCIENCE MONTHLY is published in a large octavo, handsomely printed on clear type, and, when the subjects admit, fully illustrated. Each number contains 128 pages.

Terms: \$5 per Annum, or Fifty Cents per Number.

Postage free to all Subscribers in the United States, from January 1, 1875.

A new volume of THE POPULAR SCIENCE MONTHLY begins with the numbers for May and November each year. Subscriptions may commence from any date. Back numbers supplied.

Now Ready, Vols. I., II., III., IV., V., VI., VII., and VIII., of the Popular Science Monthly, embracing the numbers from 1 to 48 (May, 1872, to April, 1876). 8 vols., Svo. Cloth, \$3.50 per vol. Half Morocco, \$6.50 per vol.

For Sale, Binding Cases for Vols. I., II., III., IV., V., VI., VII., and VIII., of The Popular Science Monthly. These covers are prepared expressly for binding the volumes of THE POPULAR SCIENCE MONTHLY as they appear, and will be sent to Subscribers on receipt of price. Any binder can attach the covers at a trifling expense. Price, 50 cents each.
